## 116 **2 Introduction**

117  
118 To evaluate conformance of a particular implementation, it is necessary to have a statement of  
119 which capabilities and options have been implemented for a given standard. Such a statement is  
120 called a protocol implementation conformance statement (PICS).

### 121 **2.1 Scope**

122 This document provides the protocol implementation conformance statement (PICS) pro forma  
123 for the ZigBee specifications cited in Reference [R2] in compliance with the relevant  
124 requirements, and in accordance with the relevant guidance, given in ISO/IEC 9646-7.

125  
126 This document addresses the ZigBee SE Application Profile.

### 127 **2.2 Purpose**

128 The supplier of a protocol implementation claiming to conform to the ZigBee SE Application  
129 Profile shall complete the following PICS pro forma and accompany it with the information  
130 necessary to identify fully both the supplier and the implementation.

131  
132 The PICS is in the form of answers to a set of questions in the PICS pro forma. The questions in  
133 a pro forma consist of a systematic list of protocol capabilities and options as well as their  
134 implementation requirements. The implementation requirement indicates whether  
135 implementation of a capability is mandatory, optional, or conditional depending on options  
136 selected. When a protocol implementer answers questions in a PICS pro forma, they would  
137 indicate whether an item is implemented or not, and provide explanations if an item is not  
138 implemented.

### 3 Abbreviations and special symbols

139  
140  
141  
142

Notations for requirement status:

M	Mandatory
O	Optional
O.n	Optional, but support of at least one of the group of options labeled O.n is required.
N/A	Not applicable
X	Prohibited
<i>Item Number:</i> <i>:Status</i>	Status is conditional on support of item number

143  
144  
145  
146  
147  
148  
149

“*Item Number*”: Conditional, status dependent upon the support marked for the “*Item Number*”.

For example, FD1: O.1 indicates that the status is optional but at least one of the features described in FD1 is required to be implemented, if this implementation is to follow the standard of which this PICS Pro forma is a part.

**4 Instructions for completing the PICS pro forma**

150  
151  
152 If a given implementation is claimed to conform to this standard, the actual PICS pro forma to be  
153 filled in by a supplier shall be technically equivalent to the text of the PICS pro forma in this  
154 annex, and shall preserve the numbering and naming and the ordering of the PICS pro forma.

155  
156 A PICS which conforms to this document shall be a conforming PICS pro forma completed in  
157 accordance with the instructions for completion given in this annex.

158  
159 The main part of the PICS is a fixed-format questionnaire, divided into five tables. Answers to  
160 the questionnaire are to be provided in the rightmost column, either by simply marking an  
161 answer to indicate a restricted choice (such as Yes or No), or by entering a value, set, or range of  
162 values.

## 6 Identification of the protocol

266

267

This PICS pro forma applies to ZigBee SE Application Profile, cited in Reference [R2].

**7 Global statement of conformance**

268  
269 The implementation described in this PICS pro forma meets all of the mandatory requirements of  
270 the referenced standards:  
271

272  
273 Application Profile: ZigBee SE – 07-5356-18  
274

275  Yes

276  No  
277

278 Note -- Answering ‘No’ indicates non-conformance to the specified protocol standard. Non-  
279 supported mandatory capabilities are to be identified in the following tables, with an explanation  
280 by the implementer explaining why the implementation is non-conforming.  
281
