## 1 Introduction

2 To evaluate conformance of a particular implementation, it is necessary to have a statement of which  
3 capabilities and options have been implemented for a given standard. Such a statement is called a  
4 protocol implementation conformance statement (PICS).

### 5 1.1 Scope

6 This document provides the protocol implementation conformance statement (PICS) proforma for  
7 ZigBee specification (053474r17) in compliance with the relevant requirements, and in accordance  
8 with the relevant guidance, given in ISO/IEC 9646-7.

### 9 1.2 Purpose

10 The supplier of a protocol implementation claiming to conform to the ZigBee standard shall complete  
11 the following PICS proforma and accompany it with the information necessary to identify fully both  
12 the supplier and the implementation.

13  
14 The protocol implementation conformance statement (PICS) of a protocol implementation is a  
15 statement of which capabilities and options of the protocol have been implemented. The statement is in  
16 the form of answers to a set of questions in the PICS proforma. The questions in a proforma consist of  
17 a systematic list of protocol capabilities and options as well as their implementation requirements. The  
18 implementation requirement indicates whether implementation of a capability is mandatory, optional,  
19 or conditional depending on options selected. When a protocol implementer answers questions in a  
20 PICS proforma, they would indicate whether an item is implemented or not, and provide explanations  
21 if an item is not implemented.

## 2 References

The following standards and specifications contain provisions, which through reference in this document constitute provisions of this specification. All the standards and specifications listed are normative references. At the time of publication, the editions indicated were valid. All standards and specifications are subject to revision, and parties to agreements based on this specification are encouraged to investigate the possibility of applying the most recent editions of the standards and specifications indicated below.

### 3 Definitions

<b>Feature set</b>	A collection of parameter values and configuration settings, collectively and loosely referred to as “knobs” in [R2], that determine the specific performance of a ZigBee stack variant and govern interoperability between stacks provided by different vendors.
<b>ZigBee coordinator</b>	An IEEE 802.15.4-2003 PAN coordinator operating in a ZigBee network.
<b>ZigBee end device</b>	An IEEE 802.15.4-2003 RFD or FFD participating in a ZigBee network, which is neither the ZigBee coordinator nor a ZigBee router.
<b>ZigBee router</b>	An IEEE 802.15.4-2003 FFD participating in a ZigBee network, which is not the ZigBee coordinator but may act as an IEEE 802.15.4-2003 coordinator within its personal operating space, that is capable of routing messages between devices and supporting associations.

AODV	Ad-Hoc On-Demand Distance Vector
FFD	IEEE 802.15.4 Full Function Device
IEEE	Institute of Electrical and Electronic Engineers
PICS	Protocol Implementation Conformance Statement
RFD	IEEE 802.15.4 Reduced Function Device

2

## 5 General description

2 The sections in this document are:

- 3 • Knob settings – details of values to be used for parameters specified in the ZigBee  
4 specification for tuning the operation of the ZigBee stack, including network, application and  
5 security settings.
- 6 • Functional description – further operational restrictions to be applied to all devices in this  
7 feature set where various approaches are otherwise supported by the ZigBee specification.
- 8 • Protocol implementation conformance statement (PICS) – a formal definition of functionality  
9 to be implemented in these devices.

10 These requirements aim to allow a designer to make necessary assumptions about what settings,  
11 features and safeguards will be in place in the networks in which a device will be deployed.

12 For clarity, settings applied to the ZigBee feature set will be marked with the string **ZigBee** and  
13 settings applied to the ZigBee-PRO feature set will be marked with the string **ZigBee-PRO**.

## 6 Knob settings

### 6.1 Introduction

This section specifies values for parameters specified in the ZigBee specification for tuning the operation of the ZigBee and ZigBee-PRO stack. This section describes settings for both ZigBee and ZigBee-PRO feature sets applied to the ZigBee-2007 Specification ([R1])

### 6.2 Network settings

The network settings for the ZigBee and ZigBee-PRO feature sets are, for the most part, described in the restricted PICS captured in Section 8.4. Those setting not covered by the PICS are listed in Table 2.

**Table 2 – Network settings for this feature set**

Parameter Name	Setting		Comments
<i>nwkTransactionPersistenceTime</i>	0x01f4	ZigBee	Note that this value essentially “covers” the MAC attribute of the same name.
		ZigBee-PRO	Note also that, while [R1] implies that this quantity has meaning only in beacon-enabled networks, it may actually be used in beaconless networks as well and, in that case, is a multiplier for <i>aBaseSuperframeDuration</i> . The value here yields a persistence time of 7.68 seconds using the 2.4Ghz symbol rate from [R5] in a non-beaconed network.
<i>nwkReportConstantCost</i>	FALSE	ZigBee	The NWK layer in PRO shall always calculate routing cost on the basis of neighbor link cost and never report constant cost.
		ZigBee-PRO	

### 6.3 Application settings

The application settings for the ZigBee and ZigBee-PRO feature sets are, for the most part, described in the restricted PICS captured in Section 8.6. Those setting not covered by the PICS are listed in Table 3.

**Table 3 – Application settings for this feature set**

Parameter Name	Setting		Comments
Number of active endpoints per sleeping ZigBee end device (maximum)	-	ZigBee	As the responsibility to arrange for caching of service discovery information lies with the end device itself, this parameter is not restricted.
		ZigBee-PRO	

Parameter Name	Setting	Comments	
Config_NWK_Leave_removeChildren	FALSE	ZigBee	
		ZigBee-PRO	

## 1 6.4 Security settings

2 The security settings for the ZigBee and ZigBee-PRO feature sets are listed in Table 4.

3 **Table 4 – Security settings for this feature set**

Parameter Name	Setting	Comments	
apsSecurityTimeoutPeriod	50ms * (2*NWK Maximum Depth) + (AES Encrypt/Decrypt times)	ZigBee	Where AES Encrypt/Decrypt times = 200ms, and  Where NWK Maximum Depth is assumed to be 5, meaning every device in the network can be reached in not more than 10 hops.  I.e. 700 milliseconds. Note that this timeout assumes worst case AES engine speeds and is not indicative of expected performance for most devices.
		ZigBee-PRO	Where AES Encrypt/Decrypt times = 200ms, and  Where NWK Maximum Depth is assumed to be 15, meaning every device in the network can be reached in not more than 30 hops.  I.e. 1.7 seconds. Note that this timeout assumes worst case AES engine speeds and is not indicative of expected performance for most devices.

4

## 7 Functional description

For the most part, the functioning of ZigBee and ZigBee-PRO with respect to the NWK layer, the APS layer and the ZDO is described in [R1]. However, the configuration details and operational requirements for devices operating under the ZigBee and ZigBee-PRO feature sets lead to some special functional considerations, which are detailed here.

### 7.1 Device roles

The basic roles performed by ZigBee devices in ZigBee and ZigBee-PRO networks are determined by their device type:

- The **ZigBee coordinator** initiates network formation, choosing the network channel, PAN ID and extended PAN ID in the process, and thereafter should act as a ZigBee router. It may also perform the roles of trust center and Network Channel Manager. With respect to binding, the ZigBee coordinator is expected to handle end device bind request on behalf of all end devices in the network but is not expected to be a global binding repository for the network.
- **ZigBee routers** are called upon to relay traffic on behalf of other devices in the network and, in particular, are required to act as routing agents on behalf of their end device children, which will typically not have the neighbor tables, routing tables, route discovery tables or broadcast transaction tables required to perform routing. Since end devices may sleep, ZigBee routers and ZigBee coordinators in their role of ZigBee routers may cache discovery information on behalf of their sleeping end-device children. A ZigBee router may perform the role of trust center and Network Channel Manager.
- **ZigBee end devices** are joined to and managed by ZigBee routers or the ZigBee coordinator. Because ZigBee-PRO networks are beaconless, there is no built-in synchronization mechanism between sleeping end devices and their router parents. End devices are free to set their own duty cycles within the broad polling limits defined by this feature set. End devices that wish to have their discovery information cached by their parent or some other device are responsible for using the discovery cache commands to achieve this.

Under the ZigBee and ZigBee-PRO feature sets, all devices are expected to manage their own binding tables if they use binding tables.

This section is valid for both the **ZigBee** and **ZigBee-PRO** feature sets.

### 7.2 ZigBee: Compatibility with Other Feature sets

Devices implementing the ZigBee feature set will advertise a feature set identifier of 1 in their beacon payloads as stated below in the additional restrictions for PICS item NLF4. In general, such devices will seek out and join networks in which the ZigBee coordinator and all ZigBee routers implement the ZigBee feature set and advertise this fact by placing a feature set identifier of 1 in their beacon payloads.

In order to provide compatibility with devices implemented according to the ZigBee-PRO feature set, ZigBee devices shall additionally be able to join networks which advertise a feature set identifier of 2 in their beacon payloads but the device must join the ZigBee-PRO networks as end devices and only those ZigBee-PRO networks employing standard network security.

This section is valid for the **ZigBee** feature set.

### 1 **7.3 ZigBee-PRO: Compatibility with Other Feature sets**

2 Devices implementing the ZigBee-PRO feature set will advertise a feature set identifier of 2 in their  
3 beacon payloads as stated below in the additional restrictions for PICS item NLF4. In general, such  
4 devices will seek out and join networks in which the ZigBee coordinator and all ZigBee routers  
5 implement the ZigBee-PRO feature set and advertise this fact by placing a feature set identifier of 2 in  
6 their beacon payloads.

7 In order to provide compatibility with devices implemented according to the ZigBee feature set,  
8 ZigBee-PRO devices shall additionally be able to join networks which advertise a feature set identifier  
9 of 1 in their beacon payloads but the device must join the ZigBee networks as end devices.

10 If a ZigBee PRO network is to allow ZigBee devices to join as end devices, it shall use the standard  
11 network security. If high security is used, ZigBee devices will not be able to be authenticated on the  
12 network.

13 This section is valid for the **ZigBee-PRO** feature set.

### 14 **7.4 Binding tables**

15 Binding tables, if used, shall be located on the source device. While binding is optional, devices that  
16 choose to use binding tables should allocate enough binding table entries to handle their own  
17 communications needs. This suggests that binding table size should be flexible enough that it can be  
18 set, at least at compile time, with some awareness of the actual intended usage of the device.

19 This section is valid for both the **ZigBee** and **ZigBee-PRO** feature sets.

### 20 **7.5 Multicast mechanism and groups**

21 Support for APS level multicasts is mandatory to support compatibility with ZigBee devices. The  
22 multicast groups are then established using the application level mechanisms. Support for routing of  
23 network level multicasts is mandatory in the ZigBee-Pro feature set.

24 ZigBee devices do not support network level multicasts.

### 25 **7.6 Trust Center Policies and Security Settings**

26 A ZigBee PRO network shall have a trust center uniquely pointed to by each device in the network  
27 through apsTrustCenterAddress within each network member device. It is beyond the scope of the  
28 PRO Feature set to describe how this value is set or whether it is changed and the Trust Center  
29 relocated to another device during operation. The only requirement of the PRO Feature set is that all  
30 devices in the network point to the one unique Trust Center and that the device pointed to as the Trust  
31 Center supplies the security services described by this document.

32 The trust center dictates the security parameters of the network, such as which network key type to use,  
33 settings of the service permissions table, when, if at all, to allow devices to use unsecured association  
34 to the network, and when, if at all, to allow an application master or link key to be set up between two  
35 devices. For interoperability, there are two distinct security settings that can be used within the ZigBee  
36 PRO feature set – a standard and a high security.

37 Networks can exist for periods without a trust center. There are some operations where it is necessary  
38 for the trust center to be operational in the network. These include initial network setup, key changes,  
39 and when joining and rejoining devices require updated keys.

1 A wide range of implementations are possible, depending on the requirements of the application. A  
2 high security trust center may allow the user to install devices “out-of-band”, keep separate link keys  
3 for different devices, optionally ignore Mgmt\_Permit\_Joining\_req commands from other nodes, and  
4 configure application trust policies between devices or groups of devices, etc. A standard security trust  
5 center would not offer these advantages, but would not be required to carry the associated costs.

## 6 **7.7 Battery powered devices**

7 ZigBee-PRO networks may, of course, contain battery-powered devices. ZigBee routers are required to  
8 have their receivers enabled whenever they are not transmitting.

9 As mentioned above, ZigBee-PRO networks are beaconless networks and, in the absence of an explicit  
10 mechanism for synchronization and indirect transmission, sleeping devices must set their own duty  
11 cycles and use polling, under ZDO control, if they expect to receive frames that are directed to them  
12 when they are asleep. The feature set provides that parent devices, i.e. ZigBee routers and the ZigBee  
13 coordinator, hold frames for 7.5 seconds on behalf of sleeping end devices and this is also, roughly  
14 speaking, the maximum polling rate prescribed here. Devices may implement a polling interval longer  
15 than 7.5 seconds, however the application will then have to handle the potential loss of messages  
16 during longer sleep cycles.

## 17 **7.8 Mains powered devices**

18 It is assumed that for most ZigBee-PRO networks, the ZigBee coordinator and ZigBee routers will be  
19 mains-powered and always on in order to properly perform their required roles with respect to the  
20 operation of the network.

## 21 **7.9 Persistent storage**

22 The ZigBee-PRO feature set does not support devices without persistent storage. Devices have  
23 information required to be saved between unintentional restarts and power failures. See [R1] sections  
24 2.2.8 and 3.6.8 for details of persistent data in the application and NWK layers. Various security  
25 material shall additionally be stored across power failures. All attributes in sections 4.3.3 and 4.4.10  
26 shall be stored, except that it is not mandatory to store those values which can safely be recovered  
27 using other stored information, or other methods.

## 28 **7.10 Address Reuse**

29 Re-use of previously assigned network short addresses in ZigBee-PRO devices is permitted subject to  
30 execution of the address conflict procedure by the device on the re-used address.

## 31 **7.11 Duty cycle limitations and fragmentation**

32 No mandatory restrictions are defined for intermittent, low channel usage data, although developers are  
33 encouraged to minimise bandwidth usage wherever possible.

34 Large acknowledged unicast transmissions should generally use the APS fragmentation mechanism,  
35 where supported, as this handles retransmissions, duplicate rejection, flow control and congestion  
36 control automatically. Use of the fragmentation mechanism is as specified in the application profile  
37 documents.

### 1 7.11.1 Vulnerability join

2 Vulnerability join shall be optional for networked devices, but support for it shall be mandatory for  
3 trust centers. The default for networks is permit joining is off. Permit joining is allowed for  
4 established time periods based on application requirements and specific instructions based on the  
5 system design.

6 Devices that join but do not successfully acquire and use the relevant security keys within the specified  
7 security timeout period shall disassociate themselves from the network, and their short address may be  
8 reused.

### 9 7.11.2 Pre-installation

10 Pre-installation is acceptable. Pre-installed devices are not exempt from the other requirements in this  
11 document. For example, a device certified as a trust center for this feature set shall support  
12 vulnerability installation of new devices, even if it is initially pre-installed.

## 13 7.12 Security

14 This feature set is designed to allow the efficient deployment of low cost devices, while also supporting  
15 the security requirements of highly sensitive applications. Installation and network maintenance  
16 procedures and administration are defined with the goal of satisfying the requirements of a range of  
17 applications within a single network infrastructure.

18 To achieve this, two security modes are specified: Standard mode and High Security mode. By default  
19 all applications will use the network key for communications. However, where confidentiality from  
20 other network nodes is required an application shall be permitted to use application link keys. Where  
21 link keys are required by specific application profiles, commands not secured with a link key shall be  
22 processed according to the rules established by the application profile.

23 The trust center plays a key role in determining the security settings in use in the network, and can  
24 optionally be implemented to apply further restrictions on the network. Please see section **Error!**  
25 **Reference source not found.** for details.

26 It is recommended that the trust center change the network key if it is discovered that any device has  
27 been stolen or otherwise compromised, and in order to avoid deadlock if all frame counter records  
28 become filled up. It is an application responsibility within the Trust Center to effect the change to the  
29 network key. There is no expectation that the network key be changed when adding a new device.

30 All devices may implement a service permissions table, which they may use to determine which  
31 devices are authorized to issue which commands. Unauthorized commands should not be carried out.

32 The trust center should be implemented to make appropriate choices about when to initiate an  
33 application master/link key shared between two devices. Where restrictions between devices are  
34 required it is the responsibility of the system installer/administrator to deploy a suitably intelligent trust  
35 center and configure it to make relevant checks before initiating sharing of application link keys  
36 between two devices. For example, it might facilitate policies based on certain times, certain  
37 manufacturers or device types, or when the trust center is configured in a certain way, etc. By default a  
38 simple trust center should always allow requests for link keys.

39 Devices may perform the relevant in or out of band authentication or key exchange before acquiring or  
40 using a link key with a new target.

### 1 **7.12.1 Security Modes within PRO Networks**

2 The feature set shall use two security modes: Standard mode and High Security mode.

3 With the Standard mode, network keys and application link keys are permitted for all devices. The  
4 network key type shall be the “standard” network key. It shall not be required that devices perform  
5 entity authentication with their parent on joining nor shall it be required to perform entity  
6 authentication between neighbors. If end devices wish to have a trust center link key, this should be  
7 requested using the request key command. Note that it is optional for the trust center to support link  
8 keys.

9 With the High Security mode, all three key types are permitted and shall be supported by all devices.  
10 The network key type shall be the “high security” network key. It shall be required that devices shall  
11 perform entity authentication with their parent on joining and it shall be required to perform entity  
12 authentication between neighbors. Frames from devices not in the neighbor table shall not be accepted.

13 When a “standard” type network key is in use, devices shall be permitted to update the network key  
14 when requested to do so by a command appropriately secured with the current network key. When a  
15 “high security” type of network key is in use this shall not be permitted. Additionally, in “high  
16 security”, new trust center link keys may be deployed by SKKE only, ie: they shall not be sent using  
17 key transport.

18 Bit 6 of the capabilities field (security bit) shall be used to indicate whether or not a joining (or  
19 rejoining) device supports High Security mode. It shall be set to 0 if the joining or rejoining device  
20 does not support High Security mode (i.e. supports Standard mode), and shall be set to 1 if it does  
21 support High Security mode. The trust center may optionally make use of this information as part of its  
22 policy settings, for example when determining whether or not to allow the device onto the network, or  
23 when determining whether to initiate SKKE with a new joiner or send a link key and/or network key in  
24 the clear to the new device.

25 The above specifications are as currently described in the ZigBee specification.. Standard mode and  
26 High Security mode allow implementation of two different strengths of security depending on the  
27 application requirements and the specification supports a device indicating its security capabilities as it  
28 joins the network, thus giving the Trust Center the means to be able to accept or reject the device based  
29 on its policy.

## 8 Protocol implementation conformance statement (PICS) proforma

### 8.1 Abbreviations and special symbols

Notations for requirement status:

M Mandatory

O Optional

O.n Optional, but support of at least one of the group of options labeled O.n is required.

N/A Not applicable

X Prohibited

“item”: Conditional, status dependent upon the support marked for the “item”.

For example, if FDT1 and FDT2 are both marked “O.1” this indicates that the status is optional but at least one of the features described in FDT1 and FDT2 is required to be implemented, if this implementation is to follow the standard of which this PICS Proforma is a part.

### 8.2 ZigBee device types

Item number	Item description	Reference	ZigBee Status	Feature set Support	Additional Constraints	Platform Support
FDT1	Is this device capable of acting as a ZigBee coordinator?	[R1]/Preface (Definitions)		ZigBee	O.1	
				ZigBee-PRO	O.1	
FDT2	Is this device capable of acting as a ZigBee router?	[R1]/Preface (Definitions)		ZigBee	O.1	
				ZigBee-PRO	O.1	
FDT3	Is this a ZigBee end device?	[R1]/Preface (Definitions)		ZigBee	O.1	
				ZigBee-PRO	O.1	

11

1 **8.3 IEEE 802.15.4 PICS**2 **8.3.1 FDT2 and FDT3 network join options**

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
JN1	The device joins a network by scanning and then associating (client)	[R5] 7.3.1.1	FDT1:X FDT2:O FDT3:O	ZigBee	FDT1: X FDT2: M FDT3: M		
				ZigBee-PRO	FDT1: X FDT2: M FDT3: M		Y
JN10	The device supports joining a network by associating (server)	[R5] 7.3.1.1	FDT1: O FDT2: O FDT3: N/A	ZigBee	FDT1: M FDT2: M FDT3: X		
				ZigBee-PRO	FDT1: M FDT2: M FDT3: X		Y
JN2	The device joins a network by using an orphan scan (client)	[R5] 7.3.2.3	FDT1: N/A FDT2: O FDT3: O	ZigBee	FDT1: X FDT2: O FDT3: O		
				ZigBee-PRO	FDT1: X FDT2: O FDT3: O		N
JN20	The device supports joining a network by using an orphan scan (server)	[R5] 7.3.2.3	FDT1: O FDT2: O FDT3: N/A	ZigBee	FDT1: M FDT2: M FDT3: X		
				ZigBee-PRO	FDT1: M FDT2: M FDT3: X		Y

3

1 **8.3.2 IEEE 802.15.4 PHY**2 **8.3.2.1 Radio frequency of operation**

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
RF1	The device operates at a frequency of 868 MHz.	[R5] 6.1.1, 6.1.2, 6.6	O <sup>3</sup>	ZigBee	O <sup>3</sup>		
				ZigBee-PRO	O <sup>3</sup>		N
RF2	The device operates at a frequency of 915 MHz.	[R5] 6.1.1, 6.1.2, 6.6	O <sup>3</sup>	ZigBee	O <sup>3</sup>		
				ZigBee-PRO	O <sup>3</sup>		N
RF3	The device operates at a frequency of 2.4 GHz.	[R5] 6.1.1, 6.1.2, 6.5	O <sup>3</sup>	ZigBee	O <sup>3</sup>		
				ZigBee-PRO	O <sup>3</sup>		Y

3 O<sup>3</sup>: at least one option must be selected.

4

5 **8.3.2.2 Clear channel assessment**

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
CCA1	Mode 1: Energy above threshold is supported.	[R5] 6.7.9	O <sup>4</sup>	ZigBee	O <sup>4</sup>		
				ZigBee-PRO	O <sup>4</sup>		Y

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
CCA2	Mode 2: Carrier sense only is supported.	[R5] 6.7.9	O <sup>4</sup>	ZigBee	O <sup>4</sup>		
				ZigBee-PRO	O <sup>4</sup>		Y
CCA3	Mode 3: Carrier sense with energy above threshold is supported.	[R5] 6.7.9	O <sup>4</sup>	ZigBee	O <sup>4</sup>		
				ZigBee-PRO	O <sup>4</sup>		Y

1 O<sup>4</sup>: at least one option must be selected.  
2

### 3 8.3.3 IEEE 802.15.4 MAC

#### 4 8.3.3.1 Channel access

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
CA1	A super-frame structure is supported.	[R5] 7.5.1.1	O	ZigBee	X		
				ZigBee-PRO	X		
CA2	Un-slotted CSMA-CA is supported.	[R5] 7.5.1.1	M	ZigBee	M	All devices shall set their MIB values as follows: <i>macBeaconOrder</i> = 0x0f, <i>macSuperframeOrder</i> = 0x0f.	
				ZigBee-PRO	M	All devices shall set their MIB values as follows: <i>macBeaconOrder</i> = 0x0f, <i>macSuperframeOrder</i> = 0x0f.	Y

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
CA3	Slotted CSMA-CA is supported.	[R5] 7.5.1.1	CA1: M	ZigBee	X		
				ZigBee-PRO	X		
CA4	Super-frame timing is supported.	[R5] 7.5.1.1	CA1: M	ZigBee	X		
				ZigBee-PRO	X		

1

2 **8.3.3.2 Guaranteed time slots**

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
GTS1	Guaranteed time slots are supported ( <i>server</i> ).	[R5] 7.5.7	FDT1: O	ZigBee	X		
				ZigBee-PRO	X		
GTS2	Guaranteed time slots are supported ( <i>client</i> ).	[R5] 7.5.7	FDT2: O FDT3: O	ZigBee	X		
				ZigBee-PRO	X		

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
GTS3	<p>The client device has the ability to request a GTS. Operations include:</p> <ul style="list-style-type: none"> <li>• Allocation requests</li> <li>• De-allocation requests</li> <li>• [MLME-GTS.request primitive]</li> <li>• [MLME-GTS.confirm primitive]</li> <li>• Transmission of the GTS request command.</li> </ul>	[R5] 7.1.7.1, 7.1.7.2, 7.3.3.1, 7.5.7.2, 7.5.7.4	GTS2: M	ZigBee	X		
				ZigBee-PRO	X		
GTS4	<p>The server has the ability to process GTS requests. Operations include:</p> <ul style="list-style-type: none"> <li>• Allocation requests</li> <li>• De-allocation requests</li> <li>• Re-allocation requests</li> <li>• [MLME-GTS.indication primitive]</li> <li>• Reception and processing of the GTS request command.</li> </ul>	[R5] 7.1.7.3, 7.3.3.1, 7.5.7.2, 7.5.7.4, 7.5.7.5	GTS1: M	ZigBee	X		
				ZigBee-PRO	X		
GTS5	The server can manage the GTSs.	[R5] 7.5.7	GTS1: M	ZigBee	X		
				ZigBee-PRO	X		

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
GTS6	The server can perform CAP maintenance.	[R5] 7.5.7.1	GTS1: M	ZigBee	X		
				ZigBee-PRO	X		
GTS7	The device can transmit and/or receive data within a GTS.	[R5] 7.5.7.3	GTS1: M GTS2: M	ZigBee	X		
				ZigBee-PRO	X		

1

2 **8.3.3.3 Scanning**

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
S1	The device can perform some form of channel scan. Operations include: <ul style="list-style-type: none"> <li>Scanning mechanism</li> <li>[MLME-SCAN.request primitive]</li> <li>[MLME-SCAN.confirm primitive]</li> </ul>	[R5] 7.1.11.1, 7.1.11.2, 7.5.2.1	M	ZigBee	M	All devices shall be able to perform at least an active scan.	
				ZigBee-PRO	M	All devices shall be able to perform at least an active scan.	Y
S2	The device can perform an energy detection scan.	[R5] 7.5.2.1.1	FDT1: M	ZigBee	FDT1: M FDT2: M FDT3: X	Network devices shall perform an energy detection scan on request from the next higher layer.	
				ZigBee-PRO	FDT1: M FDT2: M FDT3: X	The coordinator shall perform an energy detection scan on each available channel in the active channel mask before starting a network.	Y

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
S3	The device can perform an active scan. Operations include: <ul style="list-style-type: none"> <li>• Transmission of the beacon request command.</li> </ul>	[R5] 7.3.2.4, 7.5.2.1.2	FDT1: M JN1: M	ZigBee	M	All devices shall perform an active scan on each available channel in the active channel mask.	
				ZigBee-PRO	M	All devices shall perform an active scan on each available channel in the active channel mask.	Y
S4	The device can perform a passive scan.	[R5] 7.5.2.1.3	O	ZigBee	X		
				ZigBee-PRO	X		
S5	The client can perform an orphan scan. Operations include: <ul style="list-style-type: none"> <li>• Orphan device realignment.</li> <li>• Transmission of the orphan notify command.</li> <li>• Reception and processing of the coordinator realignment command.</li> </ul>	[R5] 7.3.2.3, 7.3.2.5, 7.5.2.1.4	JN2: M	ZigBee	JN2:M		
				ZigBee-PRO	JN2:M		Y
S6	The server can perform orphan scan processing. Operations include: <ul style="list-style-type: none"> <li>• [MLME-ORPHAN.indicate primitive]</li> <li>• [MLME-ORPHAN.response primitive]</li> <li>• Reception and processing of the orphan notify command.</li> <li>• Transmission of the coordinator realignment command.</li> </ul>	[R5] 7.1.8.1, 7.1.8.2, 7.3.2.3, 7.3.2.5, 7.5.2.1.4	FDT1: O FDT2: O	ZigBee	FDT1: M FDT2: M FDT3: X	Network rejoin is the preferred mechanism for devices to use, however, orphan scan may be used and the parent devices shall support orphan scan.	
				ZigBee-PRO	FDT1: M FDT2: M FDT3: X	Network rejoin is the preferred mechanism for devices to use, however, orphan scan may be used and the parent devices shall support orphan scan.	Y

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
S7	The server can receive and process a beacon request command.	[R5] 7.3.2.4	S3 & FDT1: M	ZigBee	FDT1: M FDT2: M FDT3: X		Y
				ZigBee-PRO	FDT1: M FDT2: M FDT3: X		

1

2 **8.3.3.4 PAN identifier conflict resolution**

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
PICR1	PAN identifier conflict resolution is supported ( <i>server</i> ). Operations include: <ul style="list-style-type: none"> <li>Reception and processing of the PAN identifier conflict notification command.</li> <li>Transmission of the coordinator realignment command.</li> </ul>	[R5] 7.3.2.2, 7.3.2.5, 7.5.2.2	FDT1: O	ZigBee	FDT1: X FDT2: X FDT3: X		
				ZigBee-PRO	FDT1: X FDT2: X FDT3: X		
PICR2	PAN identifier conflict resolution is supported ( <i>client</i> ). Operations include: <ul style="list-style-type: none"> <li>Transmission of the PAN identifier conflict notification command.</li> <li>Reception and processing of the coordinator realignment command.</li> </ul>	[R5] 7.3.2.2, 7.3.2.5, 7.5.2.2	FDT2: O FDT3: O	ZigBee	FDT1: X FDT2: X FDT3: X		
				ZigBee-PRO	FDT1: X FDT2: X FDT3: X		

3

1 **8.3.3.5 PAN start**

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
PS1	Starting a PAN is supported. Operations include: <ul style="list-style-type: none"> <li>[MLME-START.request primitive]</li> <li>[MLME-START.confirm primitive]</li> </ul>	[R5] 7.1.14.1, 7.1.14.2, 7.5.2.3	FDT1: M FDT2: M FDT3: O	ZigBee	FDT1: M FDT2: M FDT3: X		
				ZigBee-PRO	FDT1: M FDT2: M FDT3: X		

2

3 **8.3.3.6 Association**

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
A1	Association is supported ( <i>server</i> ).	[R5] 7.5.3.1	FDT1: O FDT2: O	ZigBee	FDT1: M FDT2: M FDT3: X		
				ZigBee-PRO	FDT1: M FDT2: M FDT3: X		
A2	Association is supported ( <i>client</i> ).	[R5] 7.5.3.1	FDT2: O FDT3: O	ZigBee	FDT1: X FDT2: M FDT3: M		
				ZigBee-PRO	FDT1: X FDT2: M FDT3: M		

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
A3	<p>The server can process association requests. Operations include:</p> <ul style="list-style-type: none"> <li>• [MLME-ASSOCIATE.indicate primitive]</li> <li>• [MLME-ASSOCIATE.response primitive]</li> <li>• Reception and processing of the association request command.</li> <li>• Transmission of the association response command.</li> </ul>	[R5] 7.1.3.2, 7.1.3.3, 7.3.1.1, 7.3.1.2	A1: M	ZigBee	FDT1: M FDT2: M FDT3: X		
				ZigBee-PRO	FDT1: M FDT2: M FDT3: X		Y
A4	<p>The client can perform association. Operations include:</p> <ul style="list-style-type: none"> <li>• [MLME-ASSOCIATE.request primitive]</li> <li>• [MLME-ASSOCIATE.confirm primitive]</li> <li>• Transmission of the association request command.</li> <li>• Reception and processing of the association response command.</li> </ul>	[R5] 7.1.3.1, 7.1.3.4, 7.3.1.1, 7.3.1.2	A2: M	ZigBee	FDT1: X FDT2: M FDT3: M		
				ZigBee-PRO	FDT1: X FDT2: M FDT3: M		Y

1

1 **8.3.3.7 Disassociation**

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
D1	The device can request a disassociation. Operations include: <ul style="list-style-type: none"> <li>• [MLME-DISASSOCIATE.request primitive]</li> <li>• [MLME-DISASSOCIATE.confirm primitive]</li> <li>• Transmission of the disassociation notify command.</li> </ul>	[R5] 7.1.4.1, 7.1.4.3, 7.3.1.3	O	ZigBee	FDT1: X FDT2: X FDT3: X		
				ZigBee-PRO	FDT1: X FDT2: X FDT3: X		
D2	The client can react to a disassociation from the server. Operations include: <ul style="list-style-type: none"> <li>• [MLME-DISASSOCIATE.indicate primitive]</li> <li>• Reception and processing of the disassociation notify command.</li> </ul>	[R5] 7.1.4.2, 7.3.1.3	O	ZigBee	FDT1: X FDT2: X FDT3: X		
				ZigBee-PRO	FDT1: X FDT2: X FDT3: X		
D3	The server can react to a disassociation from a client device. Operations include: <ul style="list-style-type: none"> <li>• [MLME-DISASSOCIATE.indicate primitive]</li> <li>• Reception and processing of the disassociation notify command.</li> </ul>	[R5] 7.1.4.2, 7.3.1.3	O	ZigBee	FDT1: X FDT2: X FDT3: X		
				ZigBee-PRO	FDT1: X FDT2: X FDT3: X		

2

1 **8.3.3.8 Beacon synchronization**

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
BS1	Beacon notification is supported. Operations include: <ul style="list-style-type: none"> <li>[MLME-BEACON-NOTIFY.indication primitive]</li> </ul>	[R5] 7.1.5.1	O	ZigBee	FDT1: M FDT2: M FDT3: M		
				ZigBee-PRO	FDT1: M FDT2: M FDT3: M		
BS2	The client can synchronize to a beacon. Operations include: <ul style="list-style-type: none"> <li>(Tracking only for beacon networks)</li> <li>[MLME-SYNC.request primitive]</li> <li>[MLME-SYNC-LOSS.indication primitive]</li> </ul>	[R5] 7.1.15.1, 7.1.15.2, 7.5.4	O	ZigBee	FDT1: X FDT2: X FDT3: X		
				ZigBee-PRO	FDT1: X FDT2: X FDT3: X		

2

3 **8.3.3.9 Transmission**

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
T1	Frame transmission is supported. Operations include: <ul style="list-style-type: none"> <li>Frame construction</li> <li>[MCPS-DATA.request primitive]</li> <li>[MCPS-DATA.confirm primitive]</li> <li>Transmission of data frames.</li> </ul>	[R5] 7.1.1.1, 7.1.1.2, 7.2.1, 7.2.2.2, 7.5.6.1	M	ZigBee	M		
				ZigBee-PRO	M		

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
T2	Implicit (command frame) transmission confirmation is supported. Operations include: <ul style="list-style-type: none"> <li>[MLME-COMM-STATUS.indication primitive]</li> </ul>	[R5] 7.1.12.1	M	ZigBee	M		Y
				ZigBee-PRO	M		

1

2 **8.3.3.10 Reception**

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
R1	Frame reception is supported. Operations include: <ul style="list-style-type: none"> <li>Data frame deconstruction</li> <li>[MCPS-DATA.indication primitive]</li> <li>Reception of data frames.</li> </ul>	[R5] 7.1.1.3, 7.2.1, 7.2.2.2	M	ZigBee	M		Y
				ZigBee-PRO	M		
R2	Receiver control is supported. Operations include: <ul style="list-style-type: none"> <li>[MLME-RX-ENABLE.request primitive]</li> <li>[MLME-RX-ENABLE.confirm primitive]</li> </ul>	[R5] 7.1.10.1, 7.1.10.2	O	ZigBee	O		Y
				ZigBee-PRO	O		
R3	Filtering and rejection is supported.	[R5] 7.5.6.2	M	ZigBee	M		Y
				ZigBee-PRO	M		

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
R4	Promiscuous mode is supported.	[R5] 7.5.6.6	O	ZigBee	O		
				ZigBee-PRO	O		N

1

2 **8.3.3.11 Transaction handling**

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
TH1	Transaction handling is supported ( <i>server</i> ).	[R5] 7.5.5	FDT1: O FDT2: O	ZigBee	FDT1: M FDT2: M FDT3: X	The server shall be able to handle at least one transaction.	
				ZigBee-PRO	FDT1: M FDT2: M FDT3: X	The server shall be able to handle at least one transaction.	Y
TH2	Transaction handling is supported ( <i>client</i> ).	[R5] 7.5.5	FDT2: O FDT3: O	ZigBee	FDT1: X FDT2: X FDT3: M		
				ZigBee-PRO	FDT1: X FDT2: X FDT3: M		
TH3	The server can manage transactions to its devices. Operations include: <ul style="list-style-type: none"> <li>Transaction queuing</li> <li>Reception and processing of the data request command.</li> </ul>	[R5] 7.5.5, 7.1.1.4, 7.1.1.5, 7.3.2.1	TH1: M	ZigBee	FDT1: M FDT2: M FDT3: X		
				ZigBee-PRO	FDT1: M FDT2: M FDT3: X		Y

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
TH30	The server can manage transaction purging operations: <ul style="list-style-type: none"> <li>[MCPS-PURGE.request primitive]</li> <li>[MCPS-PURGE.confirm primitive]</li> </ul>	[R5] 7.1.1.4, 7.1.1.5, 7.3.2.1	TH1: M	ZigBee	O		
				ZigBee-PRO	O		N
TH4	The client can extract data from the coordinator following an indication of data in a beacon.	[R5] 7.5.6.3	TH2: O <sup>5</sup>	ZigBee	FDT1: X FDT2: X FDT3: X		
				ZigBee-PRO	FDT1: X FDT2: X FDT3: X		
TH5	The client can poll for data. Operations include: <ul style="list-style-type: none"> <li>[MLME-POLL.request primitive]</li> <li>[MLME-POLL.confirm primitive]</li> <li>Transmission of the data request command.</li> </ul>	[R5] 7.1.16.1, 7.1.16.2, 7.3.2.1	TH2: O <sup>5</sup>	ZigBee	FDT1: X FDT2: X FDT3: M		
				ZigBee-PRO	FDT1: X FDT2: X FDT3: M		

1 O<sup>5</sup>: At least one of these options must be supported.

## 2 8.3.3.12 Acknowledgement service

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
AS1	The acknowledgement service is supported.	[R5] 7.5.6.4	O	ZigBee	M		
				ZigBee-PRO	M		Y

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
AS2	The device can transmit, receive and process acknowledgement frames.	[R5] 7.2.2.3	AS1: M	ZigBee	M		Y
				ZigBee-PRO	M		
AS3	Deprecated	[R5] 7.5.6.4.2, 7.5.6.5	AS1: M	ZigBee	X		
				ZigBee-PRO	X		
AS4	Retransmissions are supported.	[R5] 7.5.6.5	AS1: M	ZigBee	M		Y
				ZigBee-PRO	M		

1

2 **8.3.3.13 MIB management**

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
MM1	MIB management is supported. Operations include: <ul style="list-style-type: none"> <li>MIB attribute storage</li> </ul>	[R5] 7.4.2	O	ZigBee	M		Y
				ZigBee-PRO	M		

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
MM2	The device supports the reading of MIB attributes. Operations include: <ul style="list-style-type: none"> <li>[MLME-GET.request primitive]</li> <li>[MLME-GET.confirm primitive]</li> </ul>	[R5] 7.1.6.1, 7.1.6.2, 7.4.2	MM1: O	ZigBee	M		
				ZigBee-PRO	M		Y
MM3	The device supports the writing of MIB attributes. Operations include: <ul style="list-style-type: none"> <li>MIB attribute verification</li> <li>[MLME-SET.request primitive]</li> <li>[MLME-SET.confirm primitive]</li> </ul>	[R5] 7.1.13.1, 7.1.13.2, 7.4.2	MM1: O	ZigBee	M		
				ZigBee-PRO	M		Y

1

2 **8.3.3.14 MAC security**

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
MS1	The device supports ACL mode. Operations include: <ul style="list-style-type: none"> <li>ACL storage</li> <li>ACL mode usage</li> </ul>	[R5] 7.4.2, 7.5.8.1, 7.5.8.3	O	ZigBee	X		
				ZigBee-PRO	X		
MS2	The device supports secured mode.	[R5] 7.5.8.4	O	ZigBee	X		
				ZigBee-PRO	X		

3

4

1 **8.3.3.15 Device reset**

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
DR1	The device is able to reset. Operations include: <ul style="list-style-type: none"> <li>[MLME-RESET.request primitive]</li> <li>[MLME-RESET.confirm primitive]</li> </ul>	[R5] 7.1.9.1, 7.1.9.2	O	ZigBee	O		Y
				ZigBee-PRO	O		

2

3 **8.4 Network layer PICS**4 **8.4.1 ZigBee network frame format**

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
GFF1	Does the device support the general ZigBee network frame format?	[R1]/3.3.1		ZigBee	M		Y
				ZigBee-PRO	M		

5

6 **8.4.2 Major capabilities of the ZigBee network layer**

7 Tables in the following sub-clauses detail the capabilities of NWK layer for ZigBee devices.

8 **8.4.2.1 Network layer functions**

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
NLF1	Does the network layer support transmission of data by the next higher layer?	[R1]/3.2.1.1, 3.2.1.2, 3.6.2.1	M	ZigBee	M		Y
				ZigBee-PRO	M		

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support

## 1 8.5 Security PICS

### 2 8.5.1 ZigBee security roles

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
SR1	Is this device capable of acting in the role of a trust center?	[R1]/1.4, 4.6.2	FDT1: M FDT2: O FDT3: X	ZigBee	FDT1: M FDT2: O FDT3: X	Upon initial network formation, the coordinator must at least temporarily serve as the trust center. After formation, at least one of the routers or the coordinator must be capable of acting in the role of the trust center. It is an application responsibility to transition the trust center from the coordinator to another router device pointed to by <code>apsTrustCenterAddress</code> within all devices in the network if desired. For the device whose address is <code>apsTrustCenterAddress</code> , it is mandatory to act in the role of the trust center. All devices in the network shall maintain a single consistent definition of <code>apsTrustCenterAddress</code> . It is possible, under application control, to change <code>apsTrustCenterAddress</code> during later network operation, however, it is the application's responsibility to ensure that all devices in the network are notified of the change.	
				ZigBee-PRO	FDT1: M FDT2: O FDT3: X		Y

1 **8.5.2 ZigBee trust center capabilities**

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
TCC1	Is this device capable of acting as a ZigBee trust center in high security mode?	[R1]/1.4.1.2, 4.6.2.1	SR1:O.2	ZigBee	X		
				ZigBee-PRO	SR1: O.2	Every PRO network shall have a Trust Center either running in Standard or High Security mode  The device designated as the Trust Center shall be declared a concentrator in a PRO network and a Many to One route shall be created to the Trust Center.  At least one of TCC1 or TCC2 must be supported if the device supports SR1.	N
TCC2	Is this device capable of acting as a ZigBee trust center in standard mode?	[R1]/1.4.1.2, 4.6.2.2	SR1:O.2	ZigBee	M		
				ZigBee-PRO	SR1: O.2	Every PRO network shall have a Trust Center either running in Standard or High Security mode  The device designated as the Trust Center shall be declared a concentrator in a PRO network and a Many to One route shall be created to the Trust Center.  At least one of TCC1 or TCC2 must be supported if the device supports SR1.	Y

2

3

1 **8.5.3 Modes of operation**

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
MOO1	Is this device capable of operating in a network secured with a trust center running in high security mode?	[R1]/1.4.1.2, 4.6.2.1	O.3	ZigBee	X		
				ZigBee-PRO	O.3	A PRO device shall join a PRO network either running in Standard or High Security mode.  At least one of MOO1 or MOO2 must be supported.	N
MOO2	Is this device capable of operating in a network secured with a trust center running in standard mode?	[R1]/1.4.1.2,	O.3	ZigBee	M		
				ZigBee-PRO	O.3	A PRO device shall join a PRO network either running in Standard or High Security mode.  At least one of MOO1 or MOO2 must be supported.	Y

2

3 **8.5.4 Security levels**

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
SL1	Is this device capable of supporting security level 0x01?	[R1]/4.5.1.1.1	O.4	ZigBee	X	The device shall not apply security to outgoing frames or accept secured incoming frames using any level other than level 0x05.	
				ZigBee-PRO	X		
SL2	Is this device capable of supporting security level 0x02?	[R1]/4.5.1.1.1	O.4	ZigBee	X	The device shall not apply security to outgoing frames or accept secured incoming frames using any level other than level 0x05.	
				ZigBee-PRO	X		

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
SL3	Is this device capable of supporting security level 0x03?	[R1]/4.5.1.1.1	O.4	ZigBee	X	The device shall not apply security to outgoing frames or accept secured incoming frames using any level other than level 0x05.	
				ZigBee-PRO	X		
SL4	Is this device capable of supporting security level 0x04?	[R1]/4.5.1.1.1	O.4	ZigBee	X	The device shall not apply security to outgoing frames or accept secured incoming frames using any level other than level 0x05.	
				ZigBee-PRO	X		
SL5	Is this device capable of supporting security level 0x05?	[R1]/4.5.1.1.1	O.4	ZigBee	M	The device shall apply security to outgoing frames or accept secured incoming frames using only level 0x05 (i.e., ENC-MIC-32)	
				ZigBee-PRO	M		Y
SL6	Is this device capable of supporting security level 0x06?	[R1]/4.5.1.1.1	O.4	ZigBee	X	The device shall not apply security to outgoing frames or accept secured incoming frames using any level other than level 0x05.	
				ZigBee-PRO	X		
SL7	Is this device capable of supporting security level 0x07?	[R1]/4.5.1.1.1	O.4	ZigBee	X	The device shall not apply security to outgoing frames or accept secured incoming frames using any level other than level 0x05.	
				ZigBee-PRO	X		

1  
2

1 **8.5.5 NWK layer security**

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
NLS1	Does the device support the security processing of NWK layer outgoing frames?	[R1]/4.3.1.1	M	ZigBee	M		
				ZigBee-PRO	M		Y
NLS2	Does the device support the security processing of NWK layer incoming frames?	[R1]/4.3.1.2	M	ZigBee	M		
				ZigBee-PRO	M		Y
NLS3	Does the device support the ZigBee secured NWK layer frame format?	[R1]/4.3.1	M	ZigBee	M		
				ZigBee-PRO	M		Y
NLS4	Does the device support the ability to manage at least one network key and corresponding outgoing frame counter?	[R1]/4.2.1.3, 4.3.3	M	ZigBee	M		
				ZigBee-PRO	M		Y

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
NLS5	Does the device support the ability to manage two network keys and corresponding outgoing frame counter?	[R1]/4.2.1.3, 4.3.1, 4.3.3	O	ZigBee	M	All devices shall maintain at least 2 NWK keys with the frame counters consistent with the security mode of the network (Standard or High).  A NWK key of all zero's shall be treated as reserved. Due to the fact that a NWK key of all zero's was used as a "dummy key" and employed in the trust center exchange where pre-configured keys are used, a NWK key of all zero's is indistinguishable from transport of a dummy key.	
				ZigBee-PRO	M		Y
NLS7	Does the device support at least one frame counter for incoming NWK layer frames for each potential source of incoming frames (e.g., a coordinator or router should support the same number of counters per network key as the maximum number of neighbor table entries and an end device should support one counter per network key)?	[R1]/4.2.1.3, 4.3.1, 4.3.3	O	ZigBee	M	Devices using this stack profile in Standard Security and High Security mode shall store a single frame counter per neighbor table entry associated with the current NWK Key.	
				ZigBee-PRO	M		Y
NLS8	Does the device support a setting to indicate that all incoming NWK frames must be checked for freshness (i.e., <i>mwkAllFresh</i> ).	[R1]/4.4.1.2, 4.6.2.1, 4.6.2.2	MOO1: M MOO2: O	ZigBee	MOO1: M MOO2: O	See also the trust centre policies document [R4].	
				ZigBee-PRO	MOO1: M MOO2: O		Y

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
NLS9	Does the device support the ability to secure all incoming and outgoing NWK frames (i.e., the <i>nwkSecureAllFrames</i> attribute of the NIB)?	[R1]/4.2.3, 4.6	O	ZigBee	M	Devices using the ZigBee and ZigBee-PRO feature sets shall set:  <i>nwkSecureAllFrames</i> = TRUE	
				ZigBee-PRO	M		Y
NLS10	Does the device support the ability to reject frames from neighbors which have not been properly authenticated?	[R1]/4.2.3, 4.6	O	ZigBee	MOO1: M MOO2: O	Coordinator and Router devices employing ZigBee and ZigBee PRO Standard Mode security shall not reject frames from neighbors which have not been properly authenticated. Coordinator and Router devices employing ZigBee PRO High Security shall reject frames from neighbors which have not been properly authenticated.	
				ZigBee-PRO	MOO1: M MOO2: O		Y

1

2 **8.5.6 APS layer security**

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
ASLS1	Does the device support the security processing of APS layer outgoing frames?	[R1]/4.4.1.1	M	ZigBee	M		
				ZigBee-PRO	M		Y

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
ASLS2	Does the device support the security processing of APS layer incoming frames?	[R1]/4.4.1.2	M	ZigBee	M		
				ZigBee-PRO	M		Y
ASLS3	Does the device support the ZigBee secured APS layer frame format?	[R1]/4.4.7.3	M	ZigBee	M		
				ZigBee-PRO	M		Y
ASLS4	Does the device support the ability to manage trust center master keys?	[R1]/4.4.3, 4.4.10, 4.6.3	O	ZigBee	MOO1: M MOO2: O	In ZigBee and ZigBee PRO Standard Mode security, trust center master keys are optional for all devices. In ZigBee PRO High Security, trust center master keys mandatory for all devices.	
				ZigBee-PRO	MOO1: M MOO2: O		N
ASLS5	Does the device support the ability to manage application master keys?	[R1]/4.2.3.5, 4.4.3, 4.4.6, 4.4.10, 4.6.3.5	O	ZigBee	O	In ZigBee and ZigBee PRO Standard and ZigBee PRO High security modes, application master keys are optional for all devices.	
				ZigBee-PRO	O		N
ASLS6	Does the device support the ability to manage application data keys and corresponding security material (e.g., the incoming and outgoing frame counters)?	[R1]/4.2.1.3, 4.4.1, 4.4.10	O	ZigBee	O		
				ZigBee-PRO	O		Y

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
ASLS7	Does the device support network key incoming frame counters for incoming APS layer frames secured with the network key?	[R1]/4.4.1.2, 4.3.3	O	ZigBee	X	ZigBee and ZigBee PRO Standard Mode or ZigBee-PRO High Mode security use nwkSecure-AllFrames=TRUE, the APS security header is not employed when the network key is used for incoming APS layer frames.	
				ZigBee-PRO	X		
ASLS8	Does the device support establish-key service using the Symmetric-Key Key Establishment (SKKE) protocol?	[R1]/4.2.3.1, 4.4.2, 4.4.9.1	O	ZigBee	MOO1: M MOO2: O	In ZigBee and ZigBee PRO Standard Mode security, SKKE is optional for all devices. In ZigBee PRO High Security, SKKE is mandatory for all devices.	
				ZigBee-PRO	MOO1: M MOO2: O		N
ASLS9	Does the device support the origination of transport-key commands?	[R1]/4.2.3.2, 4.4.3, 4.4.9.2	SR1: M	ZigBee	SR1: M		
				ZigBee-PRO	SR1: M		Y
ASLS10	Does the device support the receipt of transport-key commands?	[R1]/4.2.3.2, 4.4.3, 4.4.9.2	O	ZigBee	M	A newly joined device in ZigBee or ZigBee PRO Standard and ZigBee PRO High Security shall be capable of receiving the NWK key from the trust center via transport-key commands.	
				ZigBee-PRO	M		Y
ASLS11	Does the device support the origination of update-device commands?	[R1]/4.2.3.3, 4.4.4, 4.4.9.3	FDT1: O FDT2: O FDT3: X	ZigBee	FDT1: M FDT2: M FDT3: X		
				ZigBee-PRO	FDT1: M FDT2: M FDT3: X		Y

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
ASLS12	Does the device support the receipt of update-device commands?	[R1]/4.2.3.3, 4.4.4, 4.4.9.3	SR1:M	ZigBee	SR1: M		
				ZigBee-PRO	SR1: M		
ASLS13	Does the device support the origination of remove-device commands?	[R1]/4.2.3.4, 4.4.5, 4.4.9.4	SR1:M	ZigBee	SR1: M		
				ZigBee-PRO	SR1: M		
ASLS14	Does the device support the receipt of remove-device commands?	[R1]/4.2.3.4, 4.4.5, 4.4.9.4	FDT1: O FDT2: O FDT3: X	ZigBee	FDT1: M FDT2: M FDT3: X	The trust center shall be able to ask a ZigBee router or the ZigBee coordinator to request that a child device leave the network.	
				ZigBee-PRO	FDT1: M FDT2: M FDT3: X		
ASLS15	Does the device support the origination of request-key commands?	[R1]/4.2.3.5, 4.4.6, 4.4.9.5	O	ZigBee	O		
				ZigBee-PRO	O		
ASLS16	Does the device support the receipt of request-key commands?	[R1]/4.2.3.5, 4.4.6, 4.4.9.5	SR1:M	ZigBee	SR1: M		
				ZigBee-PRO	SR1: M		

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
ASLS17	Does the device support origination of switch-key commands?	[R1]/4.2.3.6, 4.4.7, 4.4.9.6	SR1:M	ZigBee	SR1: M		
				ZigBee-PRO	SR1: M		
ASLS18	Does the device support receipt of switch-key commands?	[R1]/4.2.3.6, 4.4.7, 4.4.9.6	O	ZigBee	M		
				ZigBee-PRO	M		
ASLS19	Does the device support origination of tunnel commands?	[R1]/4.4.3.1, 4.4.9.8	SR1:M	ZigBee	MOO1: M MOO2: O	In ZigBee and ZigBee PRO Standard security, the ability to originate tunnel commands from the Trust Center is optional unless using link keys. In ZigBee PRO High Security, it is mandatory.	
				ZigBee-PRO	MOO1: M MOO2: O		
ASLS20	Does the device support receipt of tunnel commands?	[R1]/4.4.3.1, 4.4.9.8	O	ZigBee	MOO2: FDT1: O FDT2: O FDT3: X	In ZigBee and ZigBee PRO Standard and High security, the ability for the coordinator and all routers to receive tunnel commands is mandatory.	
				ZigBee-PRO	MOO1: FDT1: M FDT2: M FDT3: X  MOO2: FDT1: O FDT2: O FDT3: X		

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
ASLS21	Does the device support the authentication service using the entity authentication protocol?	[R1]/4.2.3.7, 4.4.8, 4.4.9.7	O	ZigBee	MOO2: FDT1: O FDT2: O FDT3: X	In ZigBee and ZigBee PRO Standard security, the ability to support the authentication service using the entity authentication protocol is optional. In ZigBee PRO High Security, it is mandatory.	N
				ZigBee-PRO	MOO1: FDT1: M FDT2: M FDT3: X  MOO2: FDT1: O FDT2: O FDT3: X		

### 1 8.5.7 Application layer security

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
ALS1	Is this device capable of learning and maintaining knowledge of its trust center using the <i>apsTrustCenterAddress</i> attribute in the AIB?	[R1]/4.4.10, 4.6.1	O	ZigBee	O	Trust Center must initially reside on the ZigBee coordinator but may, under application control, move to any router on the PAN as long as all devices in the PAN have their <i>apsTrustCenterAddress</i> attribute updated appropriately by the application.	Y
				ZigBee-PRO	M		
ALS2	Is this device capable of following the “joining a secure network procedure” in the role of a router?	[R1]/4.6.3.1	FDT1: O FDT2: O FDT3: X	ZigBee	FDT1: M FDT2: M FDT3: X		Y
				ZigBee-PRO	FDT1: M FDT2: M FDT3: X		

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
ALS3	Is this device capable of following the “joining a secure network procedure” in the role of a joining device?	[R1]/4.6.3.1	O	ZigBee	FDT1: X FDT2: M FDT3: M		
				ZigBee-PRO	FDT1: X FDT2: M FDT3: M		Y
ALS4	Is this device capable of following the “authentication procedure” in the role of a trust center?	[R1]/4.6.3.2, 4.6.3.2.2.1	TCC1: O TCC2: O	ZigBee	SR1: M		
				ZigBee-PRO	SR1: M		Y
ALS5	Is this device capable of following the “authentication procedure” in the role of a router?	[R1]/4.6.3.2, 4.6.3.2.1	FDT1: O FDT2: O FDT3: X	ZigBee	FDT1: M FDT2: M FDT3: X		
				ZigBee-PRO	FDT1: M FDT2: M FDT3: X		Y
ALS6	Is this device capable of following the “authentication procedure” in the role of a joining device with a preconfigured network key?	[R1]/4.6.3.2, 4.6.3.2.3.1	O	ZigBee	O	For devices implementing ZigBee and ZigBee PRO Standard Security, following the “authentication procedure” in the role of joining device with a pre-configured network key is optional. For devices implementing ZigBee PRO High Security, it is prohibited.	
				ZigBee-PRO	O		Y

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
ALS7	Is this device capable of following the “authentication procedure” in the role of a joining device with a preconfigured trust center link key?	[R1]/4.6.3.2, 4.6.3.2.3.2	O	ZigBee	O	For devices implementing ZigBee and ZigBee PRO Standard Security, following the “authentication procedure” in the role of joining device with a pre-configured trust center link key is optional. For devices implementing ZigBee PRO High Security, it is mandatory unless the ZigBee PRO High Security Trust Center policy permits in the clear delivery of the master key.	N
				ZigBee-PRO	O		
ALS8	Is this device capable of following the “authentication procedure” in the role of a joining device without preconfigured network or trust center link keys?	[R1]/4.6.3.2, 4.6.3.2.3.3	O	ZigBee	O	For devices implementing ZigBee and ZigBee PRO Standard Security, following the “authentication procedure” in the role of joining device without a pre-configured trust center link key is optional and supported by default due to the requirement to permit ZigBee Residential Security Mode devices onto PRO Standard Security networks as end devices. For devices implementing ZigBee PRO High Security, it is optional and supported only if the ZigBee PRO High Security Trust Center policy permits in the clear delivery of the master key.	N
				ZigBee-PRO	O		
ALS9	Is this device capable of following the “network key update procedure” in the role of a trust center?	[R1]/4.6.3.4, 4.6.3.4.1	TCC1: O TCC2: O	ZigBee	SR1: M		Y
				ZigBee-PRO	SR1: M		

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support

## 2 8.6.3 Major capabilities of the ZigBee application layer

3 *Tables in the following subclauses detail the capabilities of the APL layer for ZigBee devices.*

### 4 8.6.3.1 Application layer functions

#### 5 8.6.3.1.1 Application Support Sub-layer functions

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
ALF1	Does the application support sub-layer support transmission of data by the next higher layer?	[R1]/2.2.4.1.1, 2.2.4.1.2	M	ZigBee	M		Y
				ZigBee-PRO	M		
ALF200	Does the device support transmission of outgoing APS frames within APSDE with the DstAddrMode set to 0x00 (indirect)	[R1]/2.2.4.1.1	O	ZigBee	X	This must be handled by the application.	
				ZigBee-PRO	X		
ALF201	Does the device support transmission of outgoing APS frames within APSDE with the DstAddrMode set to 0x01 (group addressed)	[R1]/2.2.4.1.1	M	ZigBee	M		Y
				ZigBee-PRO	M		

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
ALF202	Does the device support transmission of outgoing APS frames within APSDE with the DstAddrMode set to 0x02 (unicast using NWK address and Destination Endpoint)	[R1]/2.2.4.1.1	M	ZigBee	M		
				ZigBee-PRO	M		Y
ALF203	Does the device support transmission of outgoing APS frames within APSDE with the DstAddrMode set to 0x03 (unicast using IEEE address and Destination Endpoint)	[R1]/2.2.4.1.1	O	ZigBee	O		
				ZigBee-PRO	O		Y
ALF2	Does the application support sub-layer support reception of data by the next higher layer at the endpoint supplied by the incoming packet?	[R1]/2.2.4.1.3	M	ZigBee	M		
				ZigBee-PRO	M		Y
ALF300	Does the device support reception of incoming APS frames within APSDE with the DstAddrMode set to 0x00 (indirect)	[R1]/2.2.4.1.3	O	ZigBee	X		
				ZigBee-PRO	X		
ALF301	Does the device support reception of incoming APS frames within APSDE with the DstAddrMode set to 0x01 (group addressed)	[R1]/2.2.4.1.3	M	ZigBee	M		
				ZigBee-PRO	M		Y

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
ALF302	Does the device support reception of incoming APS frames within APSDE with the DstAddrMode set to 0x02 (unicast using NWK address and Destination Endpoint)	[R1]/2.2.4.1.3	M	ZigBee	M		
				ZigBee-PRO	M		Y
ALF3	Does the application support sub-layer support BIND and UNBIND requests and confirms?	[R1]/2.2.4.3.1, 2.2.4.3.2, 2.2.4.3.3, 2.2.4.3.4	O	ZigBee	O	Binding support is optional for all devices, except that: <ul style="list-style-type: none"> <li>Source binding only is supported (coordinator based binding is disallowed)</li> <li>All devices shall minimally respond with NOT_IMPLEMENTED</li> </ul>	
				ZigBee-PRO	O	The ZigBee Coordinator shall implement the mechanism for matching end device bind requests (AZD24; FDT1: M).	N
ALF4	Does the device's application support sub-layer offer the next higher layer the ability to get application information base (AIB) attributes.	[R1]/2.2.4.4.1, 2.2.4.4.2	M	ZigBee	M		
				ZigBee-PRO	M		Y
ALF5	Does the device's application support sub-layer offer the next higher layer the ability to set application information base (AIB) attributes.	[R1]/2.2.4.4.3, 2.2.4.4.4	M	ZigBee	M		
				ZigBee-PRO	M		Y

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
ALF100	Does the application support sub-layer support ADD GROUP requests and confirms?	[R1]/2.2.4.5.1, 2.2.4.5.2	M	ZigBee	O	If supported, the group table in the APS shall contain a minimum of 16 group addresses.	
				ZigBee-PRO	O		Y
ALF101	Does the application support sub-layer support REMOVE GROUP requests and confirms?	[R1]/2.2.4.5.3, 2.2.4.5.4	M	ZigBee	O		
				ZigBee-PRO	O		Y
ALF102	Does the application support sub-layer support REMOVE ALL GROUPS requests and confirms?	[R1]/2.2.4.5.5, 2.2.4.5.6	M	ZigBee	O		
				ZigBee-PRO	O		Y

1

2 **8.6.3.1.2 Application layer frames**

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
ADF1	Does the device support the origination of application data frames.	[R1]/2.2.5.1, 2.2.5.2.1, 2.2.8.4.1	M	ZigBee	M		
				ZigBee-PRO	M		Y

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
ADF2	Does the device support the receipt of application data frames.	[R1]/2.2.5.1 2.2.5.2.1, 2.2.8.3.2, 2.2.8.3.3	M	ZigBee	M		Y
				ZigBee-PRO	M		
ADF3	Does the device support the origination of application data frames with the auxiliary APS security header?	[R1]/ 2.2.5.1, 2.2.5.2.1, 2.2.8.4.1, 4.4.1.1	O	ZigBee	O	Use of the auxiliary APS security header is optional for all devices. The application profiles shall determine requirements for use of the auxiliary APS security header.	N
				ZigBee-PRO	O		
ADF4	Does the device support the receipt of application data frames with the auxiliary APS security header?	[R1]/ 2.2.5.1 2.2.5.2.1, 2.2.8.3.2, 2.2.8.3.3, 4.4.1.2	O	ZigBee	O	Use of the auxiliary APS security header is optional for all devices. The application profiles shall determine requirements for use of the auxiliary APS security header.	N
				ZigBee-PRO	O		
ADF5	Does the device support the origination of application data frames with the extended APS fragmentation/re-assembly header?	[R1]/ 2.2.5.1, 2.2.5.2.1, 2.2.8.4.1, 2.2.5.1.8, 2.2.8.4.5.1	O	ZigBee	O	Use of the extended APS fragmentation/re-assembly header is optional, but in all cases the parameters shall be set by agreement within specific application profiles.	Y
				ZigBee-PRO	O	Devices using the ZigBee and ZigBee-PRO feature sets shall set:  <i>Config_Max_ZDO-Payload = 0</i> (i.e. for compatibility with the earlier ZigBee feature set, ZDO messages shall not be fragmented)	

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
ADF6	Does the device support the receipt of application data frames with the extended APS fragmentation/re-assembly header?	[R1]/ 2.2.5.1 2.2.5.2.1, 2.2.8.3.2, 2.2.8.3.3, 2.2.5.1.8, 2.2.8.4.5.2	O	ZigBee	O	Use of the extended APS fragmentation/re-assembly header is optional, but in all cases the parameters shall be set by agreement within specific application profiles.  Devices using the ZigBee and ZigBee-PRO feature sets shall set:  <i>Config_Max_ZDO-Payload = 0</i> (i.e. for compatibility with the earlier ZigBee feature set, ZDO messages shall not be fragmented)	Y
				ZigBee-PRO	O		

### 1 8.6.3.1.3 Application layer command frames

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
ACF500	Does the device support the origination of command frames with the auxiliary APS security header?	[R1]/ 2.2.5.1, 2.2.5.2.2, 2.2.6, 4.4.1.1	O	ZigBee	O		N
				ZigBee-PRO	O		
ACF501	Does the device support the receipt of command frames with the auxiliary APS security header?	[R1]/ 2.2.5.1 2.2.5.2.1, 2.2.6, 2.2.8.3.3, 4.4.1.2	O	ZigBee	O		N
				ZigBee-PRO	O		

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
ACF1	Does the device support the origination of application command frames from the Trust Center.	[R1]/4.4.9, 4.6.2, 4.6.3.2, 4.6.3.3, 4.6.3.4, 4.6.3.5, 4.6.3.6, 4.6.3.7	SDT1: M	ZigBee	SR1: M		
				ZigBee-PRO	SR1: M		Y
ACF100	Does the device support the origination of Key Establishment application command frames from the Trust Center?	[R1]/4.4.9.1	SDT1:M	ZigBee	SR1: O	In ZigBee and ZigBee PRO Standard Security Mode, it is optional to originate Key Establishment command frames from the Trust Center. In ZigBee PRO High Security, it is mandatory.	
				ZigBee-PRO	SR1: O		N
ACF101	Does the device support the origination of Transport Key application command frames from the Trust Center?	[R1]/4.4.9.2	SDT1:M	ZigBee	SR1: M	In ZigBee and ZigBee PRO Standard Security Mode, it is mandatory to originate Transport Key command frames from the Trust Center for Key Type 1 (Network Key Standard Mode). In ZigBee PRO High Security Mode, it is mandatory to originate Transport Key command frames from the Trust Center for Key Type 0 (Trust Center Master Key) and Key Type 5 (Network Key High Security Mode). It is optional in either ZigBee and ZigBee PRO Standard Security or High Security to originate Transport Key command frames for Key Types 4 (Trust Center Link Key), Key Type 2 (Application Master Key) and Key Type 3 (Application Link Key).	
				ZigBee-PRO	SR1: M		Y

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
ACF102	Does the device support the origination of Remove Device application command frames from the Trust Center?	[R1]/4.4.9.4	SDT1:M	ZigBee	SR1: M		
				ZigBee-PRO	SR1: M		Y
ACF103	Does the device support the origination of Switch Key application command frames from the Trust Center?	[R1]/4.4.9.6	SDT1:M	ZigBee	SR1: M		
				ZigBee-PRO	SR1: M		Y
ACF104	Does the device support the origination of entity authentication application command frames?	[R1]/4.4.9.7	SDT1:M	ZigBee	SR1: O		
				ZigBee-PRO	MOO2: O MOO1: M		N
ACF2	Does the device support the receipt of application command frames at the Trust Center	[R1]/4.4.9, 4.6.2, 4.6.3.2, 4.6.3.3, 4.6.3.4, 4.6.3.5, 4.6.3.6, 4.6.3.7	SDT1:M	ZigBee	SR1: M	Mandatory for the trust centre and optional for other devices.	
				ZigBee-PRO	SR1: M		Y
ACF200	Does the device support the receipt of Key Establishment application command frames at the Trust Center?	[R1]/4.4.9.1	SDT1:M	ZigBee	SR1: O	In ZigBee and ZigBee PRO Standard Security Mode, it is optional to receive Key Establishment command frames from the Trust Center. In ZigBee PRO High Security, it is mandatory.	
				ZigBee-PRO	SR1: O		N

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
ACF201	Does the device support the receipt of Transport Key application command frames at the Trust Center?	[R1]/4.4.9.2	SDT1:M	ZigBee	SR1: M	In ZigBee and ZigBee PRO Standard Security Mode, it is mandatory to receive Transport Key command frames from the Trust Center for Key Type 1 (Network Key Standard Mode). In ZigBee PRO High Security Mode, it is mandatory to receive Transport Key command frames from the Trust Center for Key Type 0 (Trust Center Master Key) and Key Type 5 (Network Key High Security Mode). It is optional in ZigBee and ZigBee PRO Standard Security to receive Transport Key command frames for Key Types 4 (Trust Center Link Key), Key Type 2 (Application Master Key) and Key Type 3 (Application Link Key). It is prohibited in ZigBee PRO High Security to receive Transport Key command frames for Key Types 4 (Trust Center Link Key) and optional to receive Transport Key command frames for Key Type 2 (Application Master Key) and Key Type 3 (Application Link Key). <sup>4</sup>	
				ZigBee-PRO	SR1: M		Y
ACF202	Does the device support the receipt of Update Device application command frames at the Trust Center?	[R1]/4.4.9.3	SDT1:M	ZigBee	SR1: M		
				ZigBee-PRO	SR1: M		Y
ACF203	Does the device support the receipt of Request Key application command frames at the Trust Center?	[R1]/4.4.9.5	SDT1:M	ZigBee	SR1: M		
				ZigBee-PRO	SR1: M		Y

<sup>4</sup> CCB 873

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
ACF204	Does the device support the receipt of entity authentication application command frames?	[R1]/4.4.9.7	SDT1:M	ZigBee	X		N
				ZigBee-PRO	MOO1: M MOO2: O		
ACF3	Does the device support the origination of application command frames from a non-Trust Center device.	[R1]/4.4.9, 4.6.3	SDT2:M	ZigBee	FDT1: X FDT2: M FDT3: O	In ZigBee and ZigBee PRO Standard Security, non Trust Center devices may optionally originate application command frames. In ZigBee PRO High Security, all non Trust Center routers and the coordinator shall originate application command frames and end devices may originate application command frames.	Y
				ZigBee-PRO	MOO1: FDT1: X FDT2: M FDT3: M  MOO2: FDT1: X FDT2: M FDT3: O		
ACF300	Does the device support the origination of Key Establishment application command frames from a non-Trust Center device?	[R1]/4.4.9.1, 4.6.3.5	SDT2:M	ZigBee	O	In ZigBee and ZigBee PRO Standard Security, it is optional for all devices to support origination of Key Establishment command frames from a non Trust Center device. In ZigBee PRO High Security, it is mandatory for all devices to support origination of Key Establishment command frames from a non Trust Center device.	N
				ZigBee-PRO	O		
ACF301	Does the device support the origination of Transport Key application command frames from a non-Trust Center device?	[R1]/4.4.9.2	SDT2:M	ZigBee	O		N
				ZigBee-PRO	O		
ACF302	Does the device support the origination of Update Device application command frames from a non-Trust Center device?	[R1]/4.4.9.3, 4.6.3.4	SDT2:M	ZigBee	FDT1: M FDT2: M FDT3: O	Assumes it is legal to have the Trust Center on a non-ZigBee Coordinator device for the ZigBee feature set via ZigBee-2007	Y
				ZigBee-PRO	FDT1: M FDT2: M FDT3: O		

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
