1 Introduction

To evaluate conformance of a particular implementation, it is necessary to have a statement of which capabilities and options have been implemented for a given standard. Such a statement is called a protocol implementation conformance statement (PICS).

1.1 Scope

This document provides the protocol implementation conformance statement (PICS) proforma for ZigBee specification (05-3474r20) in compliance with the relevant requirements, and in accordance with the relevant guidance, given in ISO/IEC 9646-7.

1.2 Purpose

The supplier of a protocol implementation claiming to conform to the ZigBee standard shall complete the following PICS proforma and accompany it with the information necessary to identify fully both the supplier and the implementation.

The protocol implementation conformance statement (PICS) of a protocol implementation is a statement of which capabilities and options of the protocol have been implemented. The statement is in the form of answers to a set of questions in the PICS proforma. The questions in a proforma consist of a systematic list of protocol capabilities and options as well as their implementation requirements. The implementation requirement indicates whether implementation of a capability is mandatory, optional, or conditional depending on options selected. When a protocol implementer answers questions in a PICS proforma, they would indicate whether an item is implemented or not, and provide explanations if an item is not implemented.

2 References

The following standards and specifications contain provisions, which through reference in this document constitute provisions of this specification. All the standards and specifications listed are normative references. At the time of publication, the editions indicated were valid. All standards and specifications are subject to revision, and parties to agreements based on this specification are encouraged to investigate the possibility of applying the most recent editions of the standards and specifications indicated below.

1

3   Definitions

Feature set	A collection of parameter values and configuration settings, collectively and loosely referred to as "knobs" in [R2], that determine the specific performance of a ZigBee stack variant and govern interoperability between stacks provided by different vendors.
ZigBee coordinator	An IEEE 802.15.4-2003 PAN coordinator operating in a ZigBee network.
ZigBee end device	An IEEE 802.15.4-2003 RFD or FFD participating in a ZigBee network, which is neither the ZigBee coordinator nor a ZigBee router.
ZigBee router	An IEEE 802.15.4-2003 FFD participating in a ZigBee network, which is not the ZigBee coordinator but may act as an IEEE 802.15.4-2003 coordinator within its personal operating space, that is capable of routing messages between devices and supporting associations.

IEEE   Institute of Electrical and Electronic Engineers

PICS   Protocol Implementation Conformance Statement

RFD   IEEE 802.15.4 Reduced Function Device

5　General description

The sections in this document are:

- Knob settings – details of values to be used for parameters specified in the ZigBee specification for tuning the operation of the ZigBee stack, including network, application and security settings.

- Functional description – further operational restrictions to be applied to all devices in this feature set where various approaches are otherwise supported by the ZigBee specification.

- Protocol implementation conformance statement (PICS) – a formal definition of functionality to be implemented in these devices.

These requirements aim to allow a designer to make necessary assumptions about what settings, features and safeguards will be in place in the networks in which a device will be deployed.

For clarity, settings applied to the ZigBee feature set will be marked with the string **ZigBee** and settings applied to the ZigBee-PRO feature set will be marked with the string **ZigBee-PRO.**

1 # 6   Knob settings

2 ## 6.1   Introduction

3 This section specifies values for parameters specified in the ZigBee specification for tuning the
4 operation of the ZigBee and ZigBee-PRO stack. This section describes settings for both ZigBee and
5 ZigBee-PRO feature sets applied to the ZigBee-2007 Specification ([R1])

6 ## 6.2   Network settings

7 The network settings for the ZigBee and ZigBee-PRO feature sets are, for the most part, described in
8 the restricted PICS captured in Section 10.4. Those setting not covered by the PICS are listed in Table
9 2.

10   **Table 2 – Network settings for this feature set**

Parameter Name	Setting		Comments
nwkTransactionPersistenceTime	0x01f4	**ZigBee**	Note that this value essentially "covers" the MAC attribute of the same name.
		ZigBee-PRO	Note also that, while [R1] implies that this quantity has meaning only in beacon-enabled networks, it may actually be used in beaconless networks as well and, in that case, is a multiplier for *aBaseSuperframeDuration*. The value here yields a persistence time of 7.68 seconds using the 2.4Ghz symbol rate from [R5] in a non-beaconed network.
nwkReportConstantCost	FALSE	**ZigBee**	The NWK layer in PRO shall always calculate routing cost on the basis of neighbor link cost and never report constant cost.
		ZigBee-PRO	

11 ## 6.3   Application settings

12 The application settings for the ZigBee and ZigBee-PRO feature sets are, for the most part, described
13 in the restricted PICS captured in Section 10.6. Those setting not covered by the PICS are listed in
14 Table 3.

15   **Table 3 – Application settings for this feature set**

Parameter Name	Setting		Comments
Number of active endpoints per sleeping ZigBee end device (maximum)	-	**ZigBee**	As the responsibility to arrange for caching of service discovery information lies with the end device itself, this parameter is not restricted.
		ZigBee-PRO	

ZigBee™
Alliance

Parameter Name	Setting	Comments	
Config_NWK_Leave_removeChildren	FALSE	**ZigBee**	
		ZigBee-PRO	

1 ## 6.4 Security settings

2 The security settings for the ZigBee and ZigBee-PRO feature sets are listed in Table 4.

3 **Table 4 – Security settings for this feature set**

Parameter Name	Setting	Comments	
apsSecurityTimeoutPeriod	TxDuration[1] * (2*NWK Maximum Depth) + (AES Encrypt/Decrypt times)	**ZigBee**	Where AES Encrypt/Decrypt times = 200ms, and Where NWK Maximum Depth is assumed to be 5, meaning every device in the network can be reached in not more than 10 hops , and Where TxDuration is assumed to be 1562.5 octetDurations (50 msec on 2.4GHz), meaning maximum duration of transmitting a packet by a hop, i.e. 700 milliseconds on 2.4 GHz. Note that this timeout assumes worst case AES engine speeds and is not indicative of expected performance for most devices.
		ZigBee-PRO	Where AES Encrypt/Decrypt times = 200ms, and Where NWK Maximum Depth is assumed to be 15, meaning every device in the network can be reached in not more than 30 hops, and Where TxDuration is assumed to be 1562.5 octetDurations (50 msec on 2.4GHz), meaning maximum duration of transmitting a packet by a hop, i.e. 1.7 seconds on 2.4 GHz. Note that this timeout assumes worst case AES engine speeds and is not indicative of expected performance for most devices.

7   Functional description

For the most part, the functioning of ZigBee and ZigBee-PRO with respect to the NWK layer, the APS layer and the ZDO is described in [R1]. However, the configuration details and operational requirements for devices operating under the ZigBee and ZigBee-PRO feature sets lead to some special functional considerations, which are detailed here.

7.1   Device roles

The basic roles performed by ZigBee devices in ZigBee and ZigBee-PRO networks are determined by their device type:

- The **ZigBee coordinator** initiates network formation, choosing the network channel, PAN ID and extended PAN ID in the process, and thereafter should act as a ZigBee router. It may also perform the roles of trust center and Network Channel Manager.   With respect to binding, the ZigBee coordinator is expected to handle end device bind request on behalf of all end devices in the network but is not expected to be a global binding repository for the network.

- **ZigBee routers** are called upon to relay traffic on behalf of other devices in the network and, in particular, are required to act as routing agents on behalf of their end device children, which will typically not have the neighbor tables, routing tables, route discovery tables or broadcast transaction tables required to perform routing. Since end devices may sleep, ZigBee routers and ZigBee coordinators in their role of ZigBee routers may cache discovery information on behalf of their sleeping end-device children. A ZigBee router may perform the role of trust center and Network Channel Manager.

- **ZigBee end devices** are joined to and managed by ZigBee routers or the ZigBee coordinator. Because ZigBee-PRO networks are beaconless, there is no built-in synchronization mechanism between sleeping end devices and their router parents. End devices are free to set their own duty cycles within the broad polling limits defined by this feature set. End devices that wish to have their discovery information cached by their parent or some other device are responsible for using the discovery cache commands to achieve this.

Under the ZigBee and ZigBee-PRO feature sets, all devices are expected to manage their own binding tables if they use binding tables.

This section is valid for both the **ZigBee** and **ZigBee-PRO** feature sets.

7.2   ZigBee: Compatibility with Other Feature sets

Devices implementing the ZigBee feature set will advertise a feature set identifier of 1 in their beacon payloads as stated below in the additional restrictions for PICS item NLF4. In general, such devices will seek out and join networks in which the ZigBee coordinator and all ZigBee routers implement the ZigBee feature set and advertise this fact by placing a feature set identifier of 1 in their beacon payloads.

In order to provide compatibility with devices implemented according to the ZigBee-PRO feature set, ZigBee devices shall additionally be able to join networks which advertise a feature set identifier of 2 in their beacon payloads but the device must join the ZigBee-PRO networks as end devices and only those ZigBee-PRO networks employing standard network security.

This section is valid for the **ZigBee** feature set.

7.3   ZigBee-PRO: Compatibility with Other Feature sets

Devices implementing the ZigBee-PRO feature set will advertise a feature set identifier of 2 in their beacon payloads as stated below in the additional restrictions for PICS item NLF4. In general, such devices will seek out and join networks in which the ZigBee coordinator and all ZigBee routers implement the ZigBee-PRO feature set and advertise this fact by placing a feature set identifier of 2 in their beacon payloads.

In order to provide compatibility with devices implemented according to the ZigBee feature set, ZigBee-PRO devices shall additionally be able to join networks which advertise a feature set identifier of 1 in their beacon payloads but the device must join the ZigBee networks as end devices.

If a ZigBee PRO network is to allow ZigBee devices to join as end devices, it shall use the standard network security. If high security is used, ZigBee devices will not be able to be authenticated on the network.

This section is valid for the **ZigBee-PRO** feature set.

7.4 Binding tables

Binding tables, if used, shall be located on the source device. While binding is optional, devices that choose to use binding tables should allocate enough binding table entries to handle their own communications needs. This suggests that binding table size should be flexible enough that it can be set, at least at compile time, with some awareness of the actual intended usage of the device.

This section is valid for both the **ZigBee** and **ZigBee-PRO** feature sets.

7.5 Multicast mechanism and groups

Support for APS level multicasts is mandatory to support compatibility with ZigBee devices. The multicast groups are then established using the application level mechanisms. Support for routing of network level multicasts is mandatory in the ZigBee-PRO feature set.

ZigBee devices do not support network level multicasts.

7.6 Trust Center Policies and Security Settings

A ZigBee PRO network shall have a trust center uniquely pointed to by each device in the network through apsTrustCenterAddress within each network member device. It is beyond the scope of the PRO Feature set to describe how this value is set or whether it is changed and the Trust Center relocated to another device during operation. The only requirement of the PRO Feature set is that all devices in the network point to the one unique Trust Center and that the device pointed to as the Trust Center supplies the security services described by this document.

The trust center dictates the security parameters of the network, such as which network key type to use, settings of the service permissions table, when, if at all, to allow devices to use unsecured association to the network, and when, if at all, to allow an application master or link key to be set up between two devices. For interoperability, there are two distinct security settings that can be used within the ZigBee PRO feature set – a standard and a high security.

Networks can exist for periods without a trust center. There are some operations where it is necessary for the trust center to be operational in the network. These include initial network setup, key changes, and when joining and rejoining devices require updated keys.

A wide range of implementations are possible, depending on the requirements of the application. A high security trust center may allow the user to install devices "out-of-band", keep separate link keys for different devices, optionally ignore Mgmt_Permit_Joining_req commands from other nodes, and configure application trust policies between devices or groups of devices, etc. A standard security trust center would not offer these advantages, but would not be required to carry the associated costs.

7.7 Battery powered devices

ZigBee-PRO networks may, of course, contain battery-powered devices. ZigBee routers are required to have their receivers enabled whenever they are not transmitting.

As mentioned above, ZigBee-PRO networks are beaconless networks and, in the absence of an explicit mechanism for synchronization and indirect transmission, sleeping devices must set their own duty cycles and use polling, under ZDO control, if they expect to receive frames that are directed to them when they are asleep. The feature set provides that parent devices, i.e. ZigBee routers and the ZigBee coordinator, hold frames for 0x01F4 symbols[2] (7.68 seconds on 2.4 GHz) on behalf of sleeping end devices and this is also, roughly speaking, the maximum polling rate prescribed here. Devices may implement a polling interval longer than 0x01F4 symbols[3], however the application will then have to handle the potential loss of messages during longer sleep cycles.

7.8 Mains powered devices

It is assumed that for most ZigBee-PRO networks, the ZigBee coordinator and ZigBee routers will be mains-powered and always on in order to properly perform their required roles with respect to the operation of the network.

7.9 Persistent storage

The ZigBee-PRO feature set does not support devices without persistent storage. Devices have information required to be saved between unintentional restarts and power failures. See [R1] sections 2.2.8.1 and 3.6.8 for details of persistent data in the application and NWK layers. Various security material shall additionally be stored across power failures. All attributes in sections 4.3.3 and 4.4.10 shall be stored, except that it is not mandatory to store those values which can safely be recovered using other stored information, or other methods.

7.10 Address Reuse

Re-use of previously assigned network short addresses in ZigBee-PRO devices is permitted subject to execution of the address conflict procedure by the device on the re-used address.

7.11 Duty cycle limitations and fragmentation

No mandatory restrictions are defined for intermittent, low channel usage data, although developers are encouraged to minimise bandwidth usage wherever possible.

Large acknowledged unicast transmissions should generally use the APS fragmentation mechanism, where supported, as this handles retransmissions, duplicate rejection, flow control and congestion control automatically. Use of the fragmentation mechanism is as specified in the application profile documents.

7.11.1 Vulnerability join

Vulnerability join shall be optional for networked devices, but support for it shall be mandatory for trust centers. The default for networks is permit joining is off. Permit joining is allowed for established time periods based on application requirements and specific instructions based on the system design.

Devices that join but do not successfully acquire and use the relevant security keys within the specified security timeout period shall disassociate themselves from the network, and their short address may be reused.

7.11.2 Pre-installation

Pre-installation is acceptable. Pre-installed devices are not exempt from the other requirements in this document. For example, a device certified as a trust center for this feature set shall support vulnerability installation of new devices, even if it is initially pre-installed.

---

[2] CCB 1624
[3] CCB 1624

7.12 Security

This feature set is designed to allow the efficient deployment of low cost devices, while also supporting the security requirements of highly sensitive applications. Installation and network maintenance procedures and administration are defined with the goal of satisfying the requirements of a range of applications within a single network infrastructure.

To achieve this, two security modes are specified: Standard mode and High Security mode. By default all applications will use the network key for communications. However, where confidentiality from other network nodes is required an application shall be permitted to use application link keys. Where link keys are required by specific application profiles, commands not secured with a link key shall be processed according to the rules established by the application profile.

The trust center plays a key role in determining the security settings in use in the network, and can optionally be implemented to apply further restrictions on the network.

It is recommended that the trust center change the network key if it is discovered that any device has been stolen or otherwise compromised, and in order to avoid deadlock if all frame counter records become filled up. It is an application responsibility within the Trust Center to effect the change to the network key. There is no expectation that the network key be changed when adding a new device.

All devices may implement a service permissions table, which they may use to determine which devices are authorized to issue which commands. Unauthorized commands should not be carried out.

The trust center should be implemented to make appropriate choices about when to initiate an application master/link key shared between two devices. Where restrictions between devices are required it is the responsibility of the system installer/administrator to deploy a suitably intelligent trust center and configure it to make relevant checks before initiating sharing of application link keys between two devices. For example, it might facilitate policies based on certain times, certain manufacturers or device types, or when the trust center is configured in a certain way, etc. By default a simple trust center should always allow requests for link keys.

Devices may perform the relevant in or out of band authentication or key exchange before acquiring or using a link key with a new target.

7.12.1 Security Modes within PRO Networks

The feature set shall use two security modes: Standard mode and High Security mode.

With the Standard mode, network keys and application link keys are permitted for all devices. The network key type shall be the "standard" network key. It shall not be required that devices perform entity authentication with their parent on joining nor shall it be required to perform entity authentication between neighbors. If end devices wish to have a trust center link key, this should be requested using the request key command. Note that it is optional for the trust center to support link keys.

With the High Security mode, all three key types are permitted and shall be supported by all devices. The network key type shall be the "high security" network key. It shall be required that devices shall perform entity authentication with their parent on joining and it shall be required to perform entity authentication between neighbors. Frames from devices not in the neighbor table shall not be accepted.

When a "standard" type network key is in use, devices shall be permitted to update the network key when requested to do so by a command appropriately secured with the current network key. When a "high security" type of network key is in use this shall not be permitted. Additionally, in "high security", new trust center link keys may be deployed by SKKE only, i.e.: they shall not be sent using key transport.

Bit 6 of the capabilities field (security bit) shall be used to indicate whether or not a joining (or rejoining) device supports High Security mode. It shall be set to 0 if the joining or rejoining device does not support High Security mode (i.e. supports Standard mode), and shall be set to 1 if it does support High Security mode. The trust center may optionally make use of this information as part of its policy settings, for example when determining whether or not to allow the device onto the network, or when determining whether to initiate SKKE with a new joiner or send a link key and/or network key in the clear to the new device.

1 The above specifications are as currently described in the ZigBee specification. Standard mode and
2 High Security mode allow implementation of two different strengths of security depending on the
3 application requirements and the specification supports a device indicating its security capabilities as it
4 joins the network, thus giving the Trust Center the means to be able to accept or reject the device based
5 on its policy.

6

8   Instructions for completing the PICS proforma

If a given implementation is claimed to conform to this standard, the actual PICS proforma to be filled in by a supplier shall be technically equivalent to the text of the PICS proforma in this document, and shall preserve the numbering and naming and the ordering of the PICS proforma.

A PICS which conforms to this document shall be a conforming PICS proforma completed in accordance with the instructions for completion given in this section.

The main part of the PICS is a fixed-format questionnaire, divided. Answers to the questionnaire are to be provided in the rightmost column, either by simply marking an answer to indicate a restricted choice (such as Yes or No), or by entering a value, set, or range of values.

4   ### 10.3.3.1   Channel access

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
CA1	A super-frame structure is supported.	[R5] 7.5.1.1	O	ZigBee	X		Click here to enter text.
				ZigBee-PRO	X		No
CA2	Un-slotted CSMA-CA is supported.	[R5] 7.5.1.1	M	ZigBee	M	All devices shall set their MIB values as follows: *macBeaconOrder* = 0x0f, *macSuperframeOrder* = 0x0f.	Click here to enter text.
				ZigBee-PRO	M	All devices shall set their MIB values as follows: *macBeaconOrder* = 0x0f, *macSuperframeOrder* = 0x0f.	Yes

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
CA3	Slotted CSMA-CA is supported.	[R5] 7.5.1.1	CA1: M	ZigBee	X		Click here to enter text.
				ZigBee-PRO	X		No
CA4	Super-frame timing is supported.	[R5] 7.5.1.1	CA1: M	ZigBee	X		Click here to enter text.
				ZigBee-PRO	X		No

1

2 ## 10.3.3.2   Guaranteed time slots

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
GTS1	Guaranteed time slots are supported (*server*).	[R5] 7.5.7	FDT1: O	ZigBee	X		Click here to enter text.
				ZigBee-PRO	X		No
GTS2	Guaranteed time slots are supported (*client*).	[R5] 7.5.7	FDT2: O FDT3: O	ZigBee	X		Click here to enter text.
				ZigBee-PRO	X		No

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
GTS3	The client device has the ability to request a GTS. Operations include: • Allocation requests • De-allocation requests • [MLME-GTS.request primitive] • [MLME-GTS.confirm primitive] • Transmission of the GTS request command.	[R5] 7.1.7.1, 7.1.7.2, 7.3.3.1, 7.5.7.2, 7.5.7.4	GTS2: M	ZigBee	X		Click here to enter text.
				ZigBee-PRO	X		No
GTS4	The server has the ability to process GTS requests. Operations include: • Allocation requests • De-allocation requests • Re-allocation requests • [MLME-GTS.indication primitive] • Reception and processing of the GTS request command.	[R5] 7.1.7.3, 7.3.3.1, 7.5.7.2, 7.5.7.4, 7.5.7.5	GTS1: M	ZigBee	X		Click here to enter text.
				ZigBee-PRO	X		No
GTS5	The server can manage the GTSs.	[R5] 7.5.7	GTS1: M	ZigBee	X		Click here to enter text.
				ZigBee-PRO	X		No

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
GTS6	The server can perform CAP maintenance.	[R5] 7.5.7.1	GTS1: M	ZigBee	X		Click here to enter text.
				ZigBee-PRO	X		No
GTS7	The device can transmit and/or receive data within a GTS.	[R5] 7.5.7.3	GTS1: M GTS2: M	ZigBee	X		Click here to enter text.
				ZigBee-PRO	X		No

1

10.3.3.3 Scanning

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
S1	The device can perform some form of channel scan. Operations include: • Scanning mechanism • [MLME-SCAN.request primitive] • [MLME-SCAN.confirm primitive]	[R5] 7.1.11.1, 7.1.11.2, 7.5.2.1	M	ZigBee	M	All devices shall be able to perform at least an active scan.	Click here to enter text.
				ZigBee-PRO	M	All devices shall be able to perform at least an active scan.	Yes
S2	The device can perform an energy detection scan.	[R5] 7.5.2.1.1	FDT1: M	ZigBee	FDT1: M FDT2: M FDT3: X	Network devices shall perform an energy detection scan on request from the next higher layer.	Click here to enter text.
				ZigBee-PRO	FDT1: M FDT2: M FDT3: X	The coordinator shall perform an energy detection scan on each available channel in the active channel mask before starting a network.	Yes

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
S3	The device can perform an active scan. Operations include: • Transmission of the beacon request command.	[R5] 7.3.2.4, 7.5.2.1.2	FDT1: M JN1: M	ZigBee	M	All devices shall perform an active scan on each available channel in the active channel mask.	Click here to enter text.
				ZigBee-PRO	M	All devices shall perform an active scan on each available channel in the active channel mask.	Yes
S4	The device can perform a passive scan.	[R5] 7.5.2.1.3	O	ZigBee	X		Click here to enter text.
				ZigBee-PRO	X		No
S5	The client can perform an orphan scan. Operations include: • Orphan device realignment. • Transmission of the orphan notify command. • Reception and processing of the coordinator realignment command.	[R5] 7.3.2.3, 7.3.2.5, 7.5.2.1.4	JN2: M	ZigBee	JN2:M		Click here to enter text.
				ZigBee-PRO	JN2:M		Yes
S6	The server can perform orphan scan processing. Operations include: • [MLME-ORPHAN.indicate primitive] • [MLME-ORPHAN.response primitive] • Reception and processing of the orphan notify command. • Transmission of the coordinator realignment command.	[R5] 7.1.8.1, 7.1.8.2, 7.3.2.3, 7.3.2.5, 7.5.2.1.4	FDT1: O FDT2: O	ZigBee	FDT1: M FDT2: M FDT3: X	Network rejoin is the preferred mechanism for devices to use, however, orphan scan may be used and the parent devices shall support orphan scan.	Click here to enter text.
				ZigBee-PRO	FDT1: M FDT2: M FDT3: X	Network rejoin is the preferred mechanism for devices to use, however, orphan scan may be used and the parent devices shall support orphan scan.	Yes

ZigBee™ Alliance

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
S7	The server can receive and process a beacon request command.	[R5] 7.3.2.4	S3 & FDT1: M	ZigBee	FDT1: M FDT2: M FDT3: X		Click here to enter text.
				ZigBee-PRO	FDT1: M FDT2: M FDT3: X		Yes

1

10.3.3.4   PAN identifier conflict resolution

2

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
PICR1	PAN identifier conflict resolution is supported (*server*). Operations include: • Reception and processing of the PAN identifier conflict notification command. • Transmission of the coordinator realignment command.	[R5] 7.3.2.2, 7.3.2.5, 7.5.2.2	FDT1: O	ZigBee	FDT1: X FDT2: X FDT3: X		Click here to enter text.
				ZigBee-PRO	FDT1: X FDT2: X FDT3: X		No
PICR2	PAN identifier conflict resolution is supported (*client*). Operations include: • Transmission of the PAN identifier conflict notification command. • Reception and processing of the coordinator realignment command.	[R5] 7.3.2.2, 7.3.2.5, 7.5.2.2	FDT2: O FDT3: O	ZigBee	FDT1: X FDT2: X FDT3: X		Click here to enter text.
				ZigBee-PRO	FDT1: X FDT2: X FDT3: X		No

3

1 **10.3.3.5   PAN start**

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
PS1	Starting a PAN is supported. Operations include: • [MLME-START.request primitive] • [MLME-START.confirm primitive]	[R5] 7.1.14.1, 7.1.14.2, 7.5.2.3	FDT1: M FDT2: M FDT3: O	ZigBee	FDT1: M FDT2: M FDT3: X		Click here to enter text.
				ZigBee-PRO	FDT1: M FDT2: M FDT3: X		Yes

2

3 **10.3.3.6   Association**

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
A1	Association is supported (*server*).	[R5] 7.5.3.1	FDT1: O FDT2: O	ZigBee	FDT1: M FDT2: M FDT3: X		Click here to enter text.
				ZigBee-PRO	FDT1: M FDT2: M FDT3: X		Yes
A2	Association is supported (*client*).	[R5] 7.5.3.1	FDT2: O FDT3: O	ZigBee	FDT1: X FDT2: M FDT3: M		Click here to enter text.
				ZigBee-PRO	FDT1: X FDT2: M FDT3: M		Yes

ZigBee™
Alliance

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
A3	The server can process association requests. Operations include: • [MLME-ASSOCIATE.indicate primitive] • [MLME-ASSOCIATE.response primitive] • Reception and processing of the association request command. • Transmission of the association response command.	[R5] 7.1.3.2, 7.1.3.3, 7.3.1.1, 7.3.1.2	A1: M	ZigBee	FDT1: M FDT2: M FDT3: X		Click here to enter text.
				ZigBee-PRO	FDT1: M FDT2: M FDT3: X		Yes
A4	The client can perform association. Operations include: • [MLME-ASSOCIATE.request primitive] • [MLME-ASSOCIATE.confirm primitive] • Transmission of the association request command. • Reception and processing of the association response command.	[R5] 7.1.3.1, 7.1.3.4, 7.3.1.1, 7.3.1.2	A2: M	ZigBee	FDT1: X FDT2: M FDT3: M		Click here to enter text.
				ZigBee-PRO	FDT1: X FDT2: M FDT3: M		Yes

1

1   **10.3.3.7   Disassociation**

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
D1	The device can request a disassociation. Operations include: • [MLME-DISASSOCIATE.request primitive] • [MLME-DISASSOCIATE.confirm primitive] • Transmission of the disassociation notify command.	[R5] 7.1.4.1, 7.1.4.3, 7.3.1.3	O	ZigBee	FDT1: X FDT2: X FDT3: X		Click here to enter text.
				ZigBee-PRO	FDT1: X FDT2: X FDT3: X		No
D2	The client can react to a disassociation from the server. Operations include: • [MLME-DISASSOCIATE.indicate primitive] • Reception and processing of the disassociation notify command.	[R5] 7.1.4.2, 7.3.1.3	O	ZigBee	FDT1: X FDT2: X FDT3: X		Click here to enter text.
				ZigBee-PRO	FDT1: X FDT2: X FDT3: X		No
D3	The server can react to a disassociation from a client device. Operations include: • [MLME-DISASSOCIATE.indicate primitive] • Reception and processing of the disassociation notify command.	[R5] 7.1.4.2, 7.3.1.3	O	ZigBee	FDT1: X FDT2: X FDT3: X		Click here to enter text.
				ZigBee-PRO	FDT1: X FDT2: X FDT3: X		No

2

1   ## 10.3.3.8   Beacon synchronization

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
BS1	Beacon notification is supported. Operations include: • [MLME-BEACON-NOTIFY.indication primitive]	[R5] 7.1.5.1	O	ZigBee	FDT1: M FDT2: M FDT3: M		Click here to enter text.
				ZigBee-PRO	FDT1: M FDT2: M FDT3: M		Yes
BS2	The client can synchronize to a beacon. Operations include: • (Tracking only for beacon networks) • [MLME-SYNC.request primitive] • [MLME-SYNC-LOSS.indication primitive]	[R5] 7.1.15.1, 7.1.15.2, 7.5.4	O	ZigBee	FDT1: X FDT2: X FDT3: X		Click here to enter text.
				ZigBee-PRO	FDT1: X FDT2: X FDT3: X		No

2

3   ## 10.3.3.9   Transmission

Item number	Item description	Reference	ZigBee Status	Feature set Support	Additional Constraints	Platform Support
T1	Frame transmission is supported. Operations include: • Frame construction • [MCPS-DATA.request primitive] • [MCPS-DATA.confirm primitive] • Transmission of data frames.	[R5] 7.1.1.1, 7.1.1.2, 7.2.1, 7.2.2.2, 7.5.6.1	M	ZigBee M		Click here to enter text.
				ZigBee-PRO M		Yes

ZigBee™
Alliance

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
T2	Implicit (command frame) transmission confirmation is supported. Operations include: • [MLME-COMM-STATUS.indication primitive]	[R5] 7.1.12.1	M	ZigBee	M		Click here to enter text.
				ZigBee-PRO	M		Yes

1

2   10.3.3.10   Reception

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
R1	Frame reception is supported. Operations include: • Data frame de-construction • [MCPS-DATA.indication primitive] • Reception of data frames.	[R5] 7.1.1.3, 7.2.1, 7.2.2.2	M	ZigBee	M		Click here to enter text.
				ZigBee-PRO	M		Yes
R2	Receiver control is supported. Operations include: • [MLME-RX-ENABLE.request primitive] • [MLME-RX-ENABLE.confirm primitive]	[R5] 7.1.10.1, 7.1.10.2	O	ZigBee	O		Click here to enter text.
				ZigBee-PRO	O		Yes
R3	Filtering and rejection is supported.	[R5] 7.5.6.2	M	ZigBee	M		Click here to enter text.
				ZigBee-PRO	M		Yes

ZigBee™ Alliance

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
R4	Promiscuous mode is supported.	[R5] 7.5.6.6	O	ZigBee	O		Click here to enter text.
				ZigBee-PRO	O		No

1

2   10.3.3.11   Transaction handling

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
TH1	Transaction handling is supported (*server*).	[R5] 7.5.5	FDT1: O FDT2: O	ZigBee	FDT1: M FDT2: M FDT3: X	The server shall be able to handle at least one transaction.	Click here to enter text.
				ZigBee-PRO	FDT1: M FDT2: M FDT3: X	The server shall be able to handle at least one transaction.	Yes
TH2	Transaction handling is supported (*client*).	[R5] 7.5.5	FDT2: O FDT3: O	ZigBee	FDT1: X FDT2: X FDT3: M		Click here to enter text.
				ZigBee-PRO	FDT1: X FDT2: X FDT3: M		Yes
TH3	The server can manage transactions to its devices. Operations include: • Transaction queuing • Reception and processing of the data request command.	[R5] 7.5.5, 7.1.1.4, 7.1.1.5, 7.3.2.1	TH1: M	ZigBee	FDT1: M FDT2: M FDT3: X		Click here to enter text.
				ZigBee-PRO	FDT1: M FDT2: M FDT3: X		Yes

ZigBee™ Alliance

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
TH30	The server can manage transaction purging operations: • [MCPS-PURGE.request primitive] • [MCPS-PURGE.confir m primitive]	[R5] 7.1.1.4, 7.1.1.5, 7.3.2.1	TH1: M	ZigBee	O		Click here to enter text.
				ZigBee-PRO	O		Yes
TH4	The client can extract data from the coordinator following an indication of data in a beacon.	[R5] 7.5.6.3	TH2: O[5]	ZigBee	FDT1: X FDT2: X FDT3: X		Click here to enter text.
				ZigBee-PRO	FDT1: X FDT2: X FDT3: X		No
TH5	The client can poll for data. Operations include: • [MLME-POLL.request primitive] • [MLME-POLL.confirm primitive] • Transmission of the data request command.	[R5] 7.1.16.1, 7.1.16.2, 7.3.2.1	TH2: O[5]	ZigBee	FDT1: X FDT2: X FDT3: M		Click here to enter text.
				ZigBee-PRO	FDT1: X FDT2: X FDT3: M		Yes

1   O[5]: At least one of these options must be supported.

2   **10.3.3.12   Acknowledgement service**

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
AS1	The acknowledgement service is supported.	[R5] 7.5.6.4	O	ZigBee	M		Click here to enter text.
				ZigBee-PRO	M		Yes

ZigBee™ Alliance

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
AS2	The device can transmit, receive and process acknowledgement frames.	[R5] 7.2.2.3	AS1: M	ZigBee	M		Click here to enter text.
				ZigBee-PRO	M		Yes
AS3	Deprecated	[R5] 7.5.6.4.2, 7.5.6.5	AS1: M	ZigBee	X		Click here to enter text.
				ZigBee-PRO	X		No
AS4	Retransmissions are supported.	[R5] 7.5.6.5	AS1: M	ZigBee	M		Click here to enter text.
				ZigBee-PRO	M		Yes

1

10.3.3.13   MIB management

2

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
MM1	MIB management is supported. Operations include: • MIB attribute storage	[R5] 7.4.2	O	ZigBee	M		Click here to enter text.
				ZigBee-PRO	M		Yes
MM2	The device supports the reading of MIB attributes. Operations include: • [MLME-GET.request primitive] • [MLME-GET.confirm primitive]	[R5] 7.1.6.1, 7.1.6.2, 7.4.2	MM1: O	ZigBee	M		Click here to enter text.
				ZigBee-PRO	M		Yes

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
MM3	The device supports the writing of MIB attributes. Operations include: • MIB attribute verification • [MLME-SET.request primitive] • [MLME-SET.confirm primitive]	[R5] 7.1.13.1, 7.1.13.2, 7.4.2	MM1: O	ZigBee	M		Click here to enter text.
				ZigBee-PRO	M		Yes

1

2 ## 10.3.3.14   MAC security

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
MS1	The device supports ACL mode. Operations include: • ACL storage • ACL mode usage	[R5] 7.4.2, 7.5.8.1, 7.5.8.3	O	ZigBee	X		Click here to enter text.
				ZigBee-PRO	X		No
MS2	The device supports secured mode.	[R5] 7.5.8.4	O	ZigBee	X		Click here to enter text.
				ZigBee-PRO	X		No

3

4

ZigBee™ Alliance

1 ### 10.3.3.15   Device reset

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
DR1	The device is able to reset. Operations include: • [MLME-RESET.request primitive] • [MLME-RESET.confirm primitive]	[R5] 7.1.9.1, 7.1.9.2	O	ZigBee	O		Click here to enter text.
				ZigBee-PRO	O		Yes

2

3 ## 10.4 Network layer PICS

4 ### 10.4.1 ZigBee network frame format

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
GFF1	Does the device support the general ZigBee network frame format?	[R1]/3.3.1		ZigBee	M		Click here to enter text.
				ZigBee-PRO	M		Yes

5

6 ### 10.4.2 Major capabilities of the ZigBee network layer

7 Tables in the following sub-clauses detail the capabilities of NWK layer for ZigBee devices.

8 ### 10.4.2.1   Network layer functions

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
NLF1	Does the network layer support transmission of data by the next higher layer?	[R1]/3.2.1.1, 3.2.1.2, 3.6.2.1	M	ZigBee	M		Click here to enter text.
				ZigBee-PRO	M		Yes

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
NLF2	Does the network layer support reception of data by the next higher layer?	[R1]/3.2.1.3, 3.6.2.2	M	ZigBee	M		Click here to enter text.
				ZigBee-PRO	M		Yes
NLF3	Does the network layer support discovery of existing ZigBee networks?	[R1]/3.2.2.1, 3.2.2.2	M	ZigBee	M		Click here to enter text.
				ZigBee-PRO	M		Yes
NLF4	Does the network layer support formation of ZigBee networks?	[R1]/3.2.2.3, 3.2.2.4, 3.6.1.1	FDT1:M, FDT2:X, FDT3:X	ZigBee	FDT1: M FDT2: X FDT3: X	Devices using the ZigBee feature set shall set: Feature set = 1 *nwkcProtocolVersion* = 2 and shall advertise these values in their beacon payload in response to MAC beacon requests. Devices using the ZigBee feature set shall also set: *nwkSecurityLevel* = 5	Click here to enter text.
				ZigBee-PRO	FDT1: M FDT2: X FDT3: X	Devices using the ZigBee-PRO feature set shall set: Feature set = 2 *nwkcProtocolVersion* = 2 and shall advertise these values in their beacon payload in response to MAC beacon requests. Devices using the ZigBee-PRO feature set shall also set: *nwkSecurityLevel* = 5	Yes
NLF5	Can the network layer permit other devices to join the network of which it is a part (and also deny such permission)?	[R1]/3.2.2.5, 3.2.2.6, 3.6.1.2	FDT1:M, FDT2:M, FDT3:X	ZigBee	FDT1: M FDT2: M FDT3: X		Click here to enter text.

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
				ZigBee PRO	FDT1: M FDT2: M FDT3: X		Yes
NLF6	Can the device start as a router?	[R1]/3.2.2.7, 3.2.2.8	FDT1:X, FDT2:M, FDT3:X	ZigBee	FDT1: X FDT2: M FDT3: X		Click here to enter text.
				ZigBee PRO	FDT1: X FDT2: M FDT3: X		Yes
NLF60	Can the network layer perform energy detection scans at the request of the next higher layer?	[R1]/3.2.2.9, 3.2.2.10	M	ZigBee	FDT1: M FDT2: M FDT3: X	NLME-ED-SCAN is mandatory for the coordinator and optional for all routers on a ZigBee network.	Click here to enter text.
				ZigBee PRO	FDT1: M FDT2: M FDT3: X	NLME-ED-SCAN is mandatory for the coordinator and all routers on a PRO network.	Yes
NLF7	Can the device request membership in a ZigBee network?	[R1]/3.2.2.11, 3.2.2.13, 3.6.1.4	FDT1: N/A FDT2: M FDT3: M	ZigBee	FDT1: X FDT2: M FDT3: M		Click here to enter text.
				ZigBee PRO	FDT1: X FDT2: M FDT3: M		Yes
NLF70	Can the device request to join or rejoin a network using the orphaning procedure?	[R1]/3.2.2.14, 3.2.2.15, 3.6.1.4.3.1	FDT1: N/A FDT2: O FDT3: O	ZigBee	FDT1: X FDT2: O FDT3: O		Click here to enter text.
				ZigBee PRO	FDT1: X FDT2: O FDT3: O		Yes
NLF71	Can the device request to join / rejoin a network using the rejoin command frame and associated procedure?	[R1]/3.2.2.11, 3.2.2.13, 3.6.1.4.2.1	FDT1: N/A FDT2: O FDT3: O	ZigBee	FDT1: X FDT2: M FDT3: M		Click here to enter text.
				ZigBee PRO	FDT1: X FDT2: M FDT3: M		Yes

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
NLF72	Can the network layer be directed by the next higher layer to change the operating channel of the network of which it is currently a part?	[R1]/3.2.2.11, 3.2.2.13	O	ZigBee	M	The network layer can be directed by the next higher layer to change the operating channel of the network of which it is currently part.	Click here to enter text.
				ZigBee-PRO	M		Yes
NLF8	Can the device respond to requests to join the network of which it is a part?	[R1]/3.6.1.4.1.2, 3.6.1.4.2.2	FDT1: M FDT2: M FDT3: X	ZigBee	FDT1: M FDT2: M FDT3: X		Click here to enter text.
				ZigBee-PRO	FDT1: M FDT2: M FDT3: X		Yes
NLF81	Does the network layer of a device inform the next higher layer when a second device has joined or rejoined its network as a child?	[R1]/3.2.2.12	FDT1: M FDT2: M FDT3: X	ZigBee	FDT1: M FDT2: M FDT3: X		Click here to enter text.
				ZigBee-PRO	FDT1: M FDT2: M FDT3: X		Yes
NLF9	Does the network layer employ the Distributed Address Mechanism to generate a unique network address to assign to a joining device?	[R1]/3.6.1.6	FDT1: O FDT2: O FDT3: N/A	ZigBee	FDT1: M FDT2: M FDT3: X	The ZigBee feature set always employs the distributed addressing scheme with: nwkMaxDepth = 5 nwkMaxChildren = 20 nwkMaxRouters = 6	Click here to enter text.
				ZigBee-PRO	FDT1: X FDT2: X FDT3: X		Yes
NLF90	Does the network layer employ the Stochastic Addressing Scheme to	[R1]/3.6.1.7	FDT1: O FDT2: O FDT3: N/A	ZigBee	FDT1: X FDT2: X FDT3: X		Click here to enter text.

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
	generate a unique network address to assign to a joining or rejoining device?			**ZigBee-PRO**	FDT1: M FDT2: M FDT3: X	The ZigBee-PRO feature set employs stochastic address allocation. The follow parameter values are defined: *nwkAddrAlloc* = 2 *nwkUseTreeRouting* = FALSE *nwkMaxDepth* = 15 Note that nwkMaxDepth above is only used to compute timeouts and shall not limit the actual network radius, as this feature set does not use tree-based addressing. The parameter *nwkMaxChildren* is not restricted in this feature set.	Yes
NLF100	Does the network layer employ the Higher Layer Address Assignment Mechanism to generate a unique network address to assign to a joining device?	Deprecated	X	**ZigBee**	X		Click here to enter text.
				ZigBee-PRO	X		No
NLF10	Can the next higher layer request that a particular device be "pre-joined" to it using the DIRECT-JOIN procedure?	[R1]/3.2.2.14, 3.2.2.15, 3.6.1.4.3	FDT1: O FDT2: O FDT3: X	**ZigBee**	X	This service is useful for testing and may be allowed as a part of test procedures at the option of the stack developer.	Click here to enter text.
				ZigBee-PRO	X	This service is useful for testing and may be allowed as a part of test procedures at the option of the stack developer.	Yes
NLF11	Can the device make a request to leave the network?	[R1]/3.2.2.16, 3.2.2.18, 3.6.1.10.1	O	**ZigBee**	FDT1: X FDT2: M FDT3: M		Click here to enter text.
				ZigBee-PRO	FDT1: X FDT2: M FDT3: M		Yes

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
NLF12	Can the device make a request that one of its child devices leave the network?	[R1]/3.2.2.16, 3.2.2.18, 3.6.1.10.2	FDT1: O FDT2: O FDT3: N/A	ZigBee	FDT1: M FDT2: M FDT3: X		Click here to enter text.
				ZigBee-PRO	FDT1: M FDT2: M FDT3: X		Yes

SR1	Is this device capable of acting in the role of a trust center?	[R1]/1.4, 4.6.2	FDT1: M FDT2: O FDT3: X	ZigBee	FDT1: M FDT2: O FDT3: X	Upon initial network formation, the coordinator must at least temporarily serve as the trust center. After formation, at least one of the routers or the coordinator must be capable of acting in the role of the trust center. It is an application responsibility to transition the trust center from the coordinator to another router device pointed to by apsTrust-CenterAddress within all devices in the network if desired. For the device whose address is apsTrustCenterAddress, it is mandatory to act in the role of the trust center. All devices in the network shall maintain a single consistent definition of apsTrust-CenterAddress. It is possible, under application control, to change apsTrustCenter-Address during later network operation,	Click here to enter text.

1   ## 10.5.5 NWK layer security

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
NLS1	Does the device support the security processing of NWK layer outgoing frames?	[R1]/4.3.1.1	M	ZigBee	M		Click here to enter text.
				ZigBee-PRO	M		Yes
NLS2	Does the device support the security processing of NWK layer incoming frames?	[R1]/4.3.1.2	M	ZigBee	M		Click here to enter text.
				ZigBee-PRO	M		Yes
NLS3	Does the device support the ZigBee secured NWK layer frame format?	[R1]/4.3.1	M	ZigBee	M		Click here to enter text.
				ZigBee-PRO	M		Yes
NLS4	Does the device support the ability to manage at least one network key and corresponding outgoing frame counter?	[R1]/4.2.1.3, 4.3.3	M	ZigBee	M		Click here to enter text.
				ZigBee-PRO	M		Yes

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
NLS5	Does the device support the ability to manage two network keys and corresponding outgoing frame counter?	[R1]/4.2.1.3, 4.3.1, 4.3.3	O	ZigBee	M	All devices shall maintain at least 2 NWK keys with the frame counters consistent with the security mode of the network (Standard or High). A NWK key of all zero's shall be treated as reserved. Due to the fact that a NWK key of all zero's was used as a "dummy key" and employed in the trust center exchange where pre-configured keys are used, a NWK key of all zero's is indistinguishable from transport of a dummy key.	Click here to enter text.
				ZigBee-PRO	M		Yes
NLS7	Does the device support at least one frame counter for incoming NWK layer frames for each potential source of incoming frames (e.g., a coordinator or router should support the same number of counters per network key as the maximum number of neighbor table entries and an end device should support one counter per network key)?	[R1]/4.2.1.3, 4.3.1, 4.3.3	O	ZigBee	M	Devices using this stack profile in Standard Security and High Security mode shall store a single frame counter per neighbor table entry associated with the current NWK Key.	Click here to enter text.
				ZigBee-PRO	M		Yes
NLS8	Does the device support a setting to indicate that all incoming NWK frames must be checked for freshness (i.e., *nwkAllFresh*).	[R1]/4.4.1.2, 4.6.2.1, 4.6.2.2	MOO1: M MOO2: O	ZigBee	MOO1: M MOO2: O	See also the trust centre policies document [R4].	Click here to enter text.
				ZigBee-PRO	MOO1: M MOO2: O		No

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
NLS9	Does the device support the ability to secure all incoming and outgoing NWK frames (i.e., the *nwkSecureAllFrames* attribute of the NIB)?	[R1]/4.2.3, 4.6	O	ZigBee	M	Devices using the ZigBee and ZigBee-PRO feature sets shall set: nwkSecureAllFrames = TRUE	Click here to enter text.
				ZigBee-PRO	M		Yes
NLS10	Does the device support the ability to reject frames from neighbors which have not been properly authenticated?	[R1]/4.2.3, 4.6	O	ZigBee	MOO1: M MOO2: O	Coordinator and Router devices employing ZigBee and ZigBee PRO Standard Mode security shall not reject frames from neighbors which have not been properly authenticated. Coordinator and Router devices employing ZigBee PRO High Security shall reject frames from neighbors which have not been properly authenticated.	Click here to enter text.
				ZigBee-PRO	MOO1: M MOO2: O		No

10.6.3 Major capabilities of the ZigBee application layer

Tables in the following subclauses detail the capabilities of the APL layer for ZigBee devices.

10.6.3.1   Application layer functions

10.6.3.1.1   Application Support Sub-layer functions

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
ALF1	Does the application support sub-layer support transmission of data by the next higher layer?	[R1]/2.2.4.1.1, 2.2.4.1.2	M	ZigBee	M		Click here to enter text.
				ZigBee-PRO	M		Yes
ALF200	Does the device support transmission of outgoing APS frames within	[R1]/2.2.4.1.1	O	ZigBee	X	This must be handled by the application.	Click here to enter text.

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
	APSDE with the DstAddrMode set to 0x00 (indirect)			ZigBee-PRO	X		Yes
ALF201	Does the device support transmission of outgoing APS frames within APSDE with the DstAddrMode set to 0x01 (group addressed)	[R1]/2.2.4.1.1	M	ZigBee	M		Click here to enter text.
				ZigBee-PRO	M		Yes
ALF202	Does the device support transmission of outgoing APS frames within APSDE with the DstAddrMode set to 0x02 (unicast using NWK address and Destination Endpoint)	[R1]/2.2.4.1.1	M	ZigBee	M		Click here to enter text.
				ZigBee-PRO	M		Yes
ALF203	Does the device support transmission of outgoing APS frames within APSDE with the DstAddrMode set to 0x03 (unicast using IEEE address and Destination Endpoint)	[R1]/2.2.4.1.1	O	ZigBee	O		Click here to enter text.
				ZigBee-PRO	O		Yes
ALF2	Does the application support sub-layer support reception of data by the next higher layer at the endpoint supplied by the incoming packet?	[R1]/2.2.4.1.3	M	ZigBee	M		Click here to enter text.
				ZigBee-PRO	M		Yes
ALF300	Does the device support reception of incoming APS frames within APSDE with the DstAddrMode set to 0x00 (indirect)	[R1]/2.2.4.1.3	O	ZigBee	X		Click here to enter text.
				ZigBee-PRO	X		Yes

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
ALF301	Does the device support reception of incoming APS frames within APSDE with the DstAddrMode set to 0x01 (group addressed)	[R1]/2.2.4.1.3	M	ZigBee	M		Click here to enter text.
				ZigBee-PRO	M		Yes
ALF302	Does the device support reception of incoming APS frames within APSDE with the DstAddrMode set to 0x02 (unicast using NWK address and Destination Endpoint)	[R1]/2.2.4.1.3	M	ZigBee	M		Click here to enter text.
				ZigBee-PRO	M		Yes
ALF3	Does the application support sub-layer support BIND and UNBIND requests and confirms?	[R1]/2.2.4.3.1, 2.2.4.3.2, 2.2.4.3.3, 2.2.4.3.4	O	ZigBee	O	Binding support is optional for all devices, except that: • Source binding only is supported (coordinator based binding is disallowed) • All devices shall minimally respond with NOT_IMPLEMENTED The ZigBee Coordinator shall implement the mechanism for matching end device bind requests (AZD24; FDT1: M).	Click here to enter text.
				ZigBee-PRO	O		Yes
ALF4	Does the device's application support sub- layer offer the next higher layer the ability to get application information base (AIB) attributes.	[R1]/2.2.4.4.1, 2.2.4.4.2	M	ZigBee	M		Click here to enter text.
				ZigBee-PRO	M		Yes
ALF5	Does the device's application support sub- layer offer the next higher layer the	[R1]/2.2.4.4.3, 2.2.4.4.4	M	ZigBee	M		Click here to enter text.
