# **ZigBee Cluster Library Basic Cluster (0x0000) Test Specification Version 1.0**

ZigBee Document 15-0301-006

December 11th, 2017

Sponsored by: ZigBee Alliance

Accepted by                      This document has been accepted for release by the ZigBee Alliance Board of Directors

Abstract                              This document describes the certification tests for devices which implement the ZCL Basic cluster.

Keywords                            ZCL, Basic, cluster

## Revision history

Revision	Date	Details	Editor
00	April, 2015	Created from ZLL & ZHA test specifications.	Phil Jamieson
01	August 12 <sup>th</sup> , 2015	Resolved comments received since the Hull test event in June 2015.	Phil Jamieson
02	September 28 <sup>th</sup> , 2015	Added new attributes from the L&O specification and the new mandatory global attribute.	Phil Jamieson
03	October 30 <sup>th</sup> , 2015	Addressed comments from GTE #3 and the v0.9 ballot.	Phil Jamieson
04	March 1 <sup>st</sup> , 2016	Addressed comments from the ZigBee 3.0 SVEs.	Phil Jamieson
05	April 15 <sup>th</sup> , 2016	Changed status to “approved” and version to 1.0.	Phil Jamieson
06	December 11 <sup>th</sup> , 2017	Updated from errata 16-02855-001: Resolved CCB 2151.	Phil Jamieson

# 1 Introduction

This document contains the PICS, test specification and PICS/test case cross reference for the ZCL *basic* cluster.

## 1.1 Conformance levels

The key words "SHALL", "SHALL NOT", "SHOULD", "SHOULD NOT", "RECOMMENDED" and "MAY" in this document are to be interpreted as described in [R5].

## 2 References

## 4 Test specification

### 4.1 Introduction

#### 4.1.1 Test case overview

The following test cases are available for the *basic* cluster:

Test ID	Description	Reference
<b>Global tests</b>		
B-TC-01G	Global attributes	4.2.1
<b>Server side tests</b>		
B-TC-01S	Attributes with server as DUT	4.3.1
B-TC-02S	Secondary functionality with server as DUT	4.3.2
<b>Client side tests</b>		
B-TC-02C	Functionality with client as DUT	4.4.1

#### 4.1.2 Testing tolerances

In test cases where a change in an attribute value is tested over time, it is permitted for the devices involved in the test to be within a tolerance of  $\pm 15\%$  of the expected value. As such, these test cases indicate that the attribute value must be approximately equal to an expected value, to which the  $\pm 15\%$  tolerance should then be applied. All other attribute values presented are expected to be exact.

#### 4.1.3 Client DUTs

For client test cases only test steps that pertain to commands that are supported on the DUT are required to be executed. All commands in this cluster for which support is indicated in the PICS shall be exercised, using valid, application achievable values.

Note that for the client attribute test case, it is permissible for the client not to be able to execute any of the test steps.

The client SHALL ensure that an application link, e.g. a binding link, exists between itself and the test harness. This should be configured before starting the test.

#### 4.1.4 Test steps manipulating attributes

In test case steps that require more than one attribute to be manipulated (e.g. read), the tester may decide whether it is appropriate or practical to send a single attribute manipulation command, containing multiple attributes, or multiple attribute manipulation commands, each containing a single attribute. The test case is designed to verify the behavior of the device supporting the attribute rather than verifying the attribute manipulation command in question.

## 4.2 Generic test cases

### 4.2.1 B-TC-01G: Global attributes

This test case verifies the behavior of the global attributes of the *basic* cluster client and server. In this test, the PICS notation B.S.Agm and B.C.Agm represents the list of global attributes that are specified as being mandatory for either the server or client, respectively. Similarly, the PICS notation B.S.Ago and B.C.Ago represents the list of global attributes that are specified as being optional for either the server or client, respectively.

#### 4.2.1.1 Scope

General:

- *Read attributes* command (0x00)
- *Read attributes response* command (0x01)
- *Write attributes* command (0x02)
- *Write attributes response* command (0x04)

*Basic* cluster (0x0000):

- All global attributes

PICS:

- B.S, B.C
- B.S.Agm, B.C.Agm, B.S.Ago, B.C.Ago

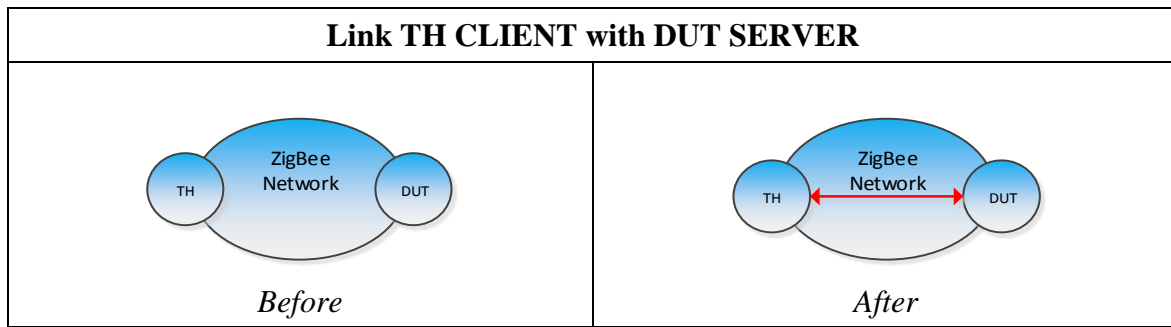

#### 4.2.1.2 Required devices

Designation	Symbol	Description
DUT		Device under test implementing: <ul style="list-style-type: none"> <li>• The <i>basic</i> cluster server or client.</li> </ul>
TH		Test harness implementing: <ul style="list-style-type: none"> <li>• The <i>basic</i> cluster client or server, i.e. the opposite cluster instantiation as implemented on the DUT.</li> </ul>

#### 4.2.1.3 Initial conditions

Item	Initial Conditions
1	A packet sniffer shall be observing the communication over the air interface.
2	All devices are factory new and powered off until used.

#### 4.2.1.4 Test preparation

B-TC-01G: Global attributes		
Item	Preparation Step	Observation
P2	Power on TH and DUT.	TH and DUT are powered on.
P3	Ensure TH and DUT are on the same ZigBee network.	Observe appropriate communication between TH, DUT and any other relevant node on the ZigBee network.

--- End of test case B-TC-01G preparation ---

163 **4.2.1.5 Test procedure**

<b>B-TC-01G: Global attributes</b>			
<b>Item</b>	<b>PICS</b>	<b>Test Harness Step</b>	<b>DUT pass Verification</b>
1	B.S.Agm, B.C.Agm	TH unicasts a ZCL <i>read attributes</i> command frame to DUT to read each mandatory global attribute of this cluster one at a time.	DUT unicasts a ZCL <i>read attributes response</i> command frame to TH containing each requested attribute.  The data type in each command must match the value listed in the specification(s). The data value in each command for the attribute must fall within the valid range described in the specification(s).
2a	B.S.Agm, B.C.Agm	TH unicasts a ZCL <i>write attributes</i> command frame to DUT to write the respective default value to each mandatory global attribute of this cluster one at a time.	DUT unicasts a ZCL <i>write attributes response</i> command frame to TH for each attribute.  If the access control of DUT is set to READ, the DUT response will indicate that the attribute write command was not a SUCCESS. If the access control of DUT is set to READ/WRITE, the DUT response will indicate that the write command was a SUCCESS.
2b	B.S.Agm, B.C.Agm	TH unicasts a ZCL <i>read attributes</i> command frame to DUT to read back each attribute written in step 2a.	DUT unicasts a ZCL <i>read attributes response</i> command frame to TH containing the requested attribute.  If the <i>Status</i> field of the <i>write attributes response</i> command frame was equal to SUCCESS, the updated value is read back. If the <i>Status</i> field of the <i>write attributes response</i> command frame was not equal to SUCCESS the value is not updated when read back.

Continued...

<b>B-TC-01G: Global attributes</b>			
<b>Item</b>	<b>PICS</b>	<b>Test Harness Step</b>	<b>DUT pass Verification</b>
3	B.S.Ago, B.C.Ago	TH unicasts a ZCL <i>read attributes</i> command frame to DUT to read each optional global attribute of this cluster one at a time.	DUT unicasts a ZCL <i>read attributes response</i> command frame to TH containing each attribute.  If the DUT implements the attribute, the <i>Status</i> field will be equal to SUCCESS and the command will contain the requested attribute. If the DUT does not implement the attribute, the <i>Status</i> field will not be equal to SUCCESS.  The data type in each command must match the value listed in the specification(s). The data value in each command for the attribute must fall within the valid range described in the specification(s).
4a	B.S.Ago, B.C.Ago	TH unicasts a ZCL <i>write attributes</i> command frame to DUT to write the respective default value to each optional global attribute of this cluster one at a time.	DUT unicasts a ZCL <i>write attributes response</i> command frame to TH for each attribute.  If the attribute is not implemented or the access control of DUT is set to READ, the DUT response will indicate that the attribute write command was not a SUCCESS. If the attribute is implemented and the access control of DUT is set to READ/WRITE, the DUT response will indicate that the write command was a SUCCESS.
4b	B.S.Ago, B.C.Ago	TH unicasts a ZCL <i>read attributes</i> command frame to DUT to read back each attribute written in step 4a.	DUT unicasts a ZCL <i>read attributes response</i> command frame to TH containing the requested attribute.  If the <i>Status</i> field of the <i>write attributes response</i> command frame was equal to SUCCESS, the updated value is read back. If the <i>Status</i> field of the <i>write attributes response</i> command frame was not equal to SUCCESS the value is not updated when read back.

--- End of test case B-TC-01G ---

## 4.3 Server test cases

### 4.3.1 B-TC-01S: Attributes with server as DUT

This test case verifies the behavior of the non-global attributes of the *basic* cluster server.

In this test, the PICS notation B.S.*Am* represents the list of non-global attributes that are specified as being mandatory. Similarly, the PICS notation B.S.*Ao* represents the list of non-global attributes that are specified as being optional.

#### 4.3.1.1 Scope

General:

- *Read attributes* command (0x00)
- *Read attributes response* command (0x01)
- *Write attributes* command (0x02)
- *Write attributes response* command (0x04)

*Basic* cluster (0x0000):

- All non-global attributes

PICS:

- B.S,
- B.S.*Am*, B.S.*Ao*

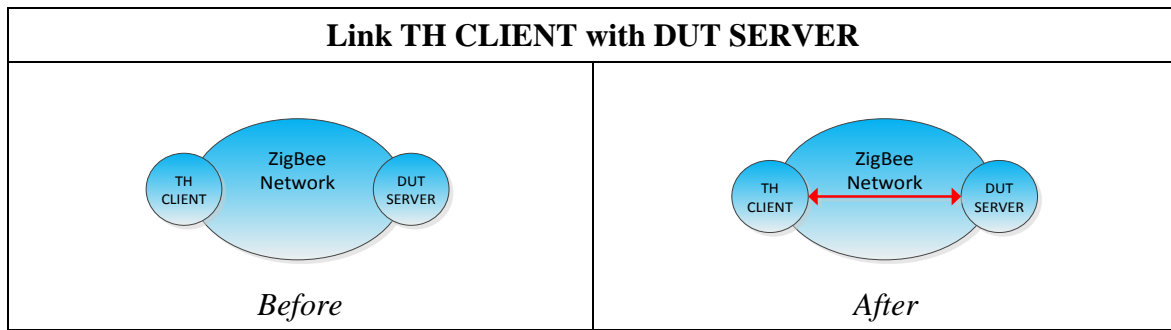

#### 4.3.1.2 Required devices

Designation	Symbol	Description
TH CLIENT		Test harness client implementing: <ul style="list-style-type: none"> <li>• The <i>basic</i> cluster client.</li> </ul>
DUT SERVER		Device under test server: <ul style="list-style-type: none"> <li>• The <i>basic</i> cluster server.</li> </ul>

#### 4.3.1.3 Initial conditions

Item	Initial Conditions
1	A packet sniffer shall be observing the communication over the air interface.
2	All devices are factory new and powered off until used.

#### 4.3.1.4 Test preparation

B-TC-01S: Attributes with server as DUT		
Item	Preparation Step	Observation
P2	Power on TH CLIENT and DUT SERVER.	TH CLIENT and DUT SERVER are powered on.
P3	Ensure TH CLIENT and DUT SERVER are on the same ZigBee network.	Observe appropriate communication between TH CLIENT, DUT SERVER and any other relevant node on the ZigBee network.

--- End of test case B-TC-01C preparation ---

190 **4.3.1.5 Test procedure**

<b>B-TC-01S: Attributes with server as DUT</b>			
<b>Item</b>	<b>PICS</b>	<b>Test Harness Step</b>	<b>DUT pass Verification</b>
1	B.S.Am	TH CLIENT unicasts a ZCL <i>read attributes</i> command frame to DUT SERVER to read each mandatory attribute of this cluster one at a time.	DUT SERVER unicasts a ZCL <i>read attributes response</i> command frame to TH CLIENT containing each requested attribute.  The data type in each command must match the value listed in the specification(s). The data value in each command for the attribute must fall within the valid range described in the specification(s).
2a	B.S.Am	TH CLIENT unicasts a ZCL <i>write attributes</i> command frame to DUT SERVER to write the respective default value to each mandatory attribute of this cluster one at a time.	DUT SERVER unicasts a ZCL <i>write attributes response</i> command frame to TH CLIENT for each attribute.  If the access control of DUT SERVER is set to READ, the DUT SERVER response will indicate that the attribute write command was not a SUCCESS. If the access control of DUT SERVER is set to READ/WRITE, the DUT SERVER response will indicate that the write command was a SUCCESS.
2b	B.S.Am	TH CLIENT unicasts a ZCL <i>read attributes</i> command frame to DUT SERVER to read back each attribute written in step 2a.	DUT SERVER unicasts a ZCL <i>read attributes response</i> command frame to TH CLIENT containing the requested attribute.  If the <i>Status</i> field of the <i>write attributes response</i> command frame was equal to SUCCESS, the updated value is read back. If the <i>Status</i> field of the <i>write attributes response</i> command frame was not equal to SUCCESS the value is not updated when read back.

192

### 4.3.2 B-TC-02S: Secondary functionality with server as DUT

This test case verifies the secondary functionality of the *basic* cluster server.

#### 4.3.2.1 Scope

General:

- *Read attributes* command (0x00)
- *Read attributes response* command (0x01)
- *Write attributes* command (0x02)
- *Write attributes response* command (0x04)
- *Default response* command (0x0b)

*Basic* cluster (0x0000):

- *DeviceEnabled* attribute (0x0012)
- *Reset to factory defaults* command (0x00)

*Identify* cluster (0x0003):

- *IdentifyTime* attribute (0x0000)
- *Identify* command (0x00)

PICS:

- B.S
- B.S.A0012
- B.S.C00.Rsp
- I.S.A0000

#### 4.3.2.2 Required devices

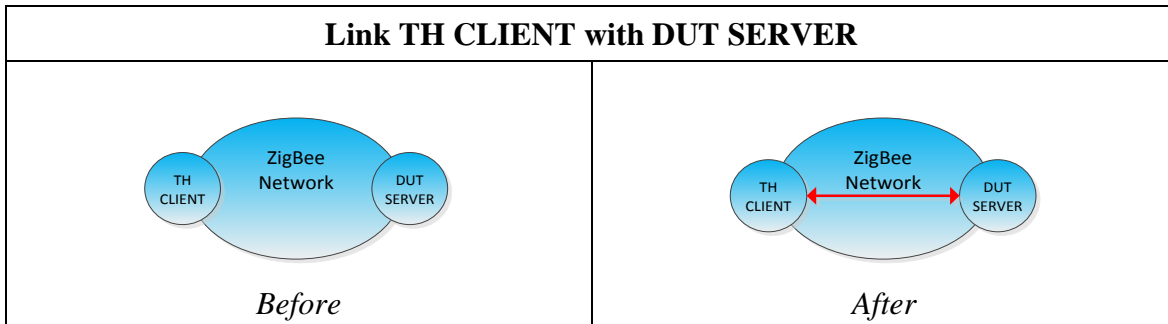

Designation	Symbol	Description
TH CLIENT		Test harness client implementing: <ul style="list-style-type: none"> <li>• The <i>basic</i> cluster client and</li> <li>• The <i>identify</i> cluster client.</li> </ul>
DUT SERVER		Device under test server implementing: <ul style="list-style-type: none"> <li>• The <i>basic</i> cluster server and</li> <li>• The <i>identify</i> cluster client.</li> </ul>

#### 4.3.2.3 Initial conditions

Item	Initial Conditions
1	A packet sniffer shall be observing the communication over the air interface.
2	All devices are factory new and powered off until used.

#### 4.3.2.4 Test preparation

B-TC-02S: Secondary functionality with server as DUT		
Item	Preparation Step	Observation
P2	Power on TH CLIENT and DUT SERVER.	TH CLIENT and DUT SERVER are powered on.
P3	Ensure TH CLIENT and DUT SERVER are on the same ZigBee network.	Observe appropriate communication between TH CLIENT, DUT SERVER and any other relevant node on the ZigBee network.

--- End of test case B-TC-02S preparation ---

#### 4.3.2.5 Test procedure

B-TC-02S: Secondary functionality with server as DUT			
Item	PICS	Test Harness Step	DUT Pass Verification
1a	I.S.A0000	TH CLIENT unicasts a ZCL <i>write attributes</i> command frame to DUT SERVER to set the <i>IdentifyTime</i> attribute of the <i>Identify</i> cluster to 0x42.	DUT SERVER unicasts a ZCL <i>write attributes response</i> command frame to TH CLIENT.
1b	I.S.A0000	TH CLIENT unicasts a ZCL <i>read attributes</i> command frame to DUT SERVER to read the <i>IdentifyTime</i> attribute.	DUT SERVER unicasts a ZCL <i>read attributes response</i> command frame to TH CLIENT. <i>IdentifyTime</i> attribute has the value 0x42.
1c	B.S.C00.Rsp	TH CLIENT unicasts a ZCL <i>reset to factory defaults</i> command to DUT SERVER with the <i>disable default response</i> sub-field of the <i>frame control</i> field of the ZCL frame set to 0 (target must send a default response).	If the <i>reset to factory defaults</i> is not supported, DUT SERVER unicasts a ZCL <i>default response</i> command frame to TH CLIENT with the <i>status</i> field equal to 0x81 (UNSUP_CLUSTER_COMMAND). If the <i>reset to factory defaults</i> is supported, DUT SERVER unicasts a ZCL <i>default response</i> command frame to TH CLIENT with the <i>status</i> field equal to 0x00 (SUCCESS).
1d	I.S.A0000	If a <i>default response</i> command was received with the <i>status</i> field equal to 0x00 (SUCCESS), TH CLIENT unicasts a ZCL <i>read attributes</i> command frame to DUT SERVER to read the <i>IdentifyTime</i> attribute of the <i>Identify</i> cluster.	DUT SERVER unicasts a ZCL <i>read attributes response</i> command frame to TH CLIENT. <i>IdentifyTime</i> attribute has the value 0x00.
<b>Testing note:</b> Steps 2-7 only apply if the <i>DeviceEnabled</i> attribute is supported on DUT SERVER.

<b>B-TC-02S: Secondary functionality with server as DUT</b>			
<b>Item</b>	<b>PICS</b>	<b>Test Harness Step</b>	<b>DUT Pass Verification</b>
2	-	TH CLIENT unicasts a ZCL command, known to be supported on the DUT, other than a <i>read attributes</i> , <i>write attributes</i> or <i>identify</i> command frame to DUT SERVER.	DUT SERVER processes and responds to the command from TH CLIENT.
3a	B.S.A0012	TH CLIENT unicasts a ZCL <i>write attributes</i> command frame to DUT SERVER to set the <i>DeviceEnabled</i> attribute to 0x00.	DUT SERVER unicasts a ZCL <i>write attributes response</i> command frame to TH CLIENT.
3b	B.S.A0012	TH CLIENT unicasts a ZCL <i>read attributes</i> command frame to DUT SERVER to read the <i>DeviceEnabled</i> attribute.	DUT SERVER unicasts a ZCL <i>read attributes response</i> command frame to TH CLIENT. <i>DeviceEnabled</i> attribute has the value 0x00.
4	B.S.A0012	TH CLIENT unicasts the same ZCL command used in step 2 to DUT SERVER.	DUT SERVER does nothing.
5a	I.S.C00.Rsp	TH CLIENT unicasts a ZCL <i>identify</i> command frame to DUT SERVER, with the <i>identify time</i> field set to 0x003c (60s).	If requested, DUT SERVER unicasts a ZCL <i>default response</i> command frame to TH CLIENT with the <i>status</i> field equal to 0x00 (SUCCESS). DUT SERVER begins to identify itself.
5b	I.S.A0000	After 40s, TH CLIENT unicasts a ZCL <i>read attributes</i> command frame to DUT SERVER to read the <i>IdentifyTime</i> attribute.	DUT SERVER unicasts a ZCL <i>read attributes response</i> command frame to TH CLIENT. <i>IdentifyTime</i> attribute has a value approximately equal to 0x0014.
6a	B.S.A0012	TH CLIENT unicasts a ZCL <i>write attributes</i> command frame to DUT SERVER to set the <i>DeviceEnabled</i> attribute to 0x01.	DUT SERVER unicasts a ZCL <i>write attributes response</i> command frame to TH CLIENT.

## 4.4 Client test cases

### 4.4.1 B-TC-01C: Functionality with client as DUT

This case test verifies the functionality of the *basic* cluster client.

The DUT client SHALL be on the same network as a suitable server, provided by the user, and this device SHALL be used by the client to exercise its functionality. The test case uses the test harness to prompt the user, based on the declared PICS, to exercise the functionality of the *basic* cluster client and to verify the results. A sniffer tool SHALL be used to log the exercised functionality and to determine its validity.

In this test case, the PICS notation B.C.CdTx represents the list of commands that are declared as being transmitted by the DUT.

#### 4.4.1.1 Scope

*Basic* cluster (0x0000):

- *Reset to factory defaults* command (0x00)

PICS:

- B.C
- B.C.C00.Tx

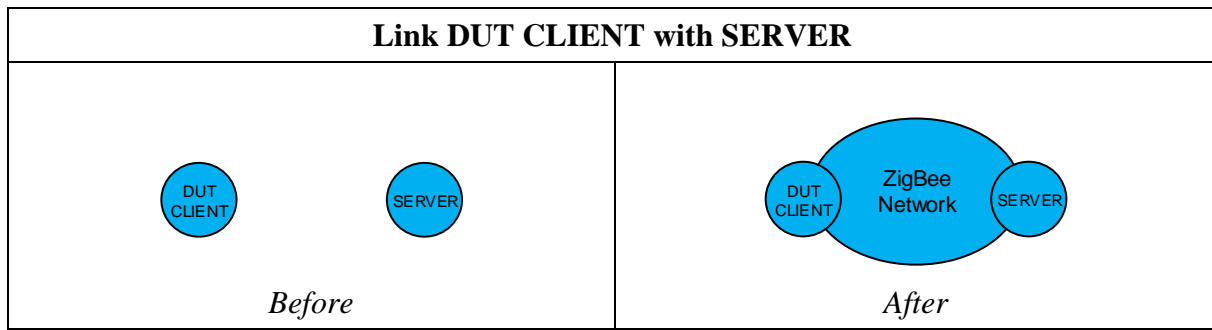

#### 4.4.1.2 Required devices

Designation	Symbol	Description
DUT CLIENT		Device under test client implementing: <ul style="list-style-type: none"> <li>• The <i>basic</i> cluster client.</li> </ul>
SERVER		Suitable server device implementing: <ul style="list-style-type: none"> <li>• The <i>basic</i> cluster server.</li> </ul>

#### 4.4.1.3 Initial conditions

Item	Initial Conditions
1	A packet sniffer shall be observing the communication over the air interface.
2	All devices are factory new and powered off until used.

#### 4.4.1.4 Test preparation

B-TC-01C: Functionality with client as DUT		
Item	Preparation Step	Observation
P1	Power on the DUT CLIENT device and the SERVER device.	DUT CLIENT and SERVER are powered on.
P2	Ensure the DUT CLIENT device and the SERVER device are on the same ZigBee network.	Observe appropriate communication between DUT CLIENT, SERVER and any other relevant node on the ZigBee network.

--- End of test case B-TC-01C preparation ---

252 **4.4.1.5 Test procedure**

<b>B-TC-01C: Functionality with client as DUT</b>			
<b>Item</b>	<b>PICS</b>	<b>Test Harness Step</b>	<b>DUT Pass Verification</b>
1	-	Test harness prompts the user with a list of commands, based on the declared PICS, which the DUT CLIENT indicates it can transmit.	None.
2	B.C.Cd.Tx	None.	DUT CLIENT transmits correctly formed commands in any order and with application achievable values. This is verified using the sniffer log.
3	-	Prompt the user to verify that the cluster commands listed in step 1 were transmitted during step 2.	During step 2, DUT CLIENT has transmitted every command listed by the test harness in step 1.
4	-	Prompt the user to verify that the cluster commands not listed in step 1 were not transmitted during step 2.	During step 2, DUT CLIENT has not transmitted any commands from this cluster that were not listed by the test harness in step 1.

--- End of test case B-TC-01C ---
