zigbee alliance

zigbee Document 08-0006-07 zigbee PRO Layer PICS and Stack Profiles Revision 06

April 2017

Sponsored by:
zigbee alliance

Accepted for release by:
ZigBee Alliance Board of Directors.

Abstract:

Keywords:
zigbee, zigbee-PRO, Stack profile, Architecture.

20 **Notice of use and disclosure**

63 You can also submit comments using the ZigBee Alliance reflector. Its web site address is:

64 www.zigbee.org

65 The information on this page should be removed when this document is accepted.

66 Participants

67 The following is a list of those who were members of the ZigBee Alliance PRO Core Stack Working
68 Group leadership when this document was released:

69 **Robert Alexander:** *Chair*

70 **Arasch Honarbacht:** *Vice Chair*

71 **Tim Gillman:** *Secretary*

72

73

74 The editing team was composed of the following members:

75

76 Colin Faulkner: EDMI, Ltd, Technical Editor ZigBee PRO Core Specification

77 Ian Winterburn: Landis&Gyr, Technical Editor ZigBee PRO Energy Specification

78 Michael Cowan: Sensus Technical Editor ZigBee PRO Energy Test Spec and PICS

79

80

81 Additionally, the following individuals contributed to the PICS document:

82 Robert Alexander Silicon Laboratories, Inc.

83 Arasch Honarbacht ubisys technologies GmbH

84 Chris Brandson Exegin

148 **Change history**

149 Table 1 shows the change history for this specification.

150 **Table 1 – Document revision change history**

Revision	Description
00	Original version based on 08-0006-05 snap shoot in Dec 2014.
01	Baseline original -00 document to ZigBee Document 08-0006-05 (R21 rev 1.0 equivalent document with all changes accepted) ZigBee PRO/2007 Layer PICS and Stack Profiles then added in R22 changes based on R22 Combined Document (Specification) dated Oct 8, 2015 10:37 AM.
02	Addressed All rev 0.7 comments and updated document for rev 0.7 re-ballot
03	Addressed All rev 0.7 re-ballot comments and updated document for rev 0.7 release
04	Address deferred rev 0.7 comments – comment 303 (Chris Brandson) fix section numbers references in PICS to match rev 0.9 PRO CORE Specification section numbers. Add update fixes for CCBs: CCB 2091 – NLF27 - Number of Entries in End Device Neighbor Table increase to 5 per specification section 3.6.1.4.2.1 CCB 2137 – Modify NLF4 slightly to note that this is for forming *centralized* networks. and AZD31 - Add a separate PICs item for forming *distributed* networks = AZD299 added. Same text for NLF4 except it would be mandatory for both FDT1 and FDT2. CCB 2144 – NDF106 – replace orphan notification and keep alive methods with end device timeout keep alive methods. CCB 2178 – Trust center must be collocated with ZC (short address 0x0000) throughout network life – SR1. CCB 2239 – Update NDF108 and NDF109 both conditional on NDF105 CCB 2240 – if support GP need to support list of items in PICS defined in CCB
05	Added Oct 17 2016 rev 0.9 comments from KAVI and release for rebalot comments
06	No rev 0.9 re-ballot comments in KAVI, updated for Rev 1.0 release plans.

151

152

153 **1 Introduction**

154 To evaluate conformance of a particular implementation, it is necessary to have a statement of which
155 capabilities and options have been implemented for a given standard. Such a statement is called a protocol
156 implementation conformance statement (PICS).

157 **1.1 Scope**

158 This document provides the protocol implementation conformance statement (PICS) proforma for
159 ZigBee R22 Draft specification (05-3474-22) in compliance with the relevant requirements, and in
160 accordance with the relevant guidance, given in ISO/IEC 9646-7. The specification adds multiband
161 functionality support which required changes to PHY/MAC and network layers. In addition ZigBee
162 2007 was been deprecated by the ZigBee Alliance therefore all ZigBee 2007 stack protocol
163 implementation conformance statement (PICS) have been removed from this document. Starting with
164 R22 and later, only ZigBee PRO stack will be supported per ZigBee 3.0 inter-operability marketing
165 decision.

166

167 **1.2 Purpose**

168 The supplier of a protocol implementation claiming to conform to the ZigBee standard shall complete
169 the following PICS proforma and accompany it with the information necessary to identify fully both
170 the supplier and the implementation.

171

172 The protocol implementation conformance statement (PICS) of a protocol implementation is a
173 statement of which capabilities and options of the protocol have been implemented. The statement is in
174 the form of answers to a set of questions in the PICS proforma. The questions in a proforma consist of
175 a systematic list of protocol capabilities and options as well as their implementation requirements. The
176 implementation requirement indicates whether implementation of a capability is mandatory, optional,
177 or conditional depending on options selected. When a protocol implementer answers questions in a
178 PICS proforma, they would indicate whether an item is implemented or not, and provide explanations
179 if an item is not implemented.

180 2 References

181 The following standards and specifications contain provisions, which through reference in this document
182 constitute provisions of this specification. All the standards and specifications listed are normative
183 references. At the time of publication, the editions indicated were valid. All standards and specifications
184 are subject to revision, and parties to agreements based on this specification are encouraged to investigate
185 the possibility of applying the most recent editions of the standards and specifications indicated below.

216

3 Definitions

Feature set	A collection of parameter values and configuration settings, collectively and loosely referred to as “knobs” in [R2], that determine the specific performance of a ZigBee stack variant and govern interoperability between stacks provided by different vendors.
ZigBee 2.4 GHz Coordinator	An IEEE 802.15.4-2011 PAN coordinator operating in a ZigBee 2.4 GHz network.
ZigBee 2.4 GHz End Device	An IEEE 802.15.4-2011 RFD participating in a ZigBee 2.4 GHz network, which is neither the ZigBee coordinator nor a ZigBee router.
ZigBee 2.4 GHz Router	An IEEE 802.15.4-2011 FFD participating in a ZigBee 2.4 GHz network, which is not the ZigBee coordinator but may act as an IEEE 802.15.4-2003 coordinator within its personal operating space, that is capable of routing messages between devices and supporting associations
ZigBee Sub-GHz Router	An IEEE 802.15.4-2015 FFD participating in a ZigBee Sub-GHz network, which is not the ZigBee coordinator but may act as an IEEE 802.15.4-2011 coordinator within its personal operating space, that is capable of routing messages between devices and supporting associations. ZigBee Sub-GHz Router (ZSR) is supported in R22 with power control on end device to routers and end devices to coordinators links. No power control for router to router, and router to coordinator links and devices should transmit at maximum power of + 14 dBm
ZigBee Multi-MAC Selection Router	An IEEE 802.15.4-2015 FFD participating in a ZigBee Sub-GHz or 2.4 GHz network but not in both bands. Power control only on Sub-GHz interface and not on the 2.4 GHz interface. Router in Sub-GHz mode in R22 will support power control on end device to routers and end devices to coordinators links. No power control for router to router, and router to coordinator links and devices should transmit at maximum power of + 14 dBm
ZigBee Multi-MAC Switch Router	An IEEE 802.15.4-2015 FFD participating in a ZigBee Sub-GHz and 2.4 GHz network. In R22 only allows a single ZigBee Multi-MAC Switch Router in the network integrated into the ZigBee Multi-MAC Switch Coordinator
ZigBee Multi-MAC Switch Coordinator	An IEEE 802.15.4-2015 PAN coordinator operating in a ZigBee 2.4 GHz network and in Sub-GHz band.
ZigBee Multi-MAC Selection End Device	An IEEE 802.15.4-2015 RFD participating in a ZigBee 2.4 GHz network or the Sub-GHz network which is neither the ZigBee coordinator nor a ZigBee router.
ZigBee Sub-GHz End Device	An IEEE 802.15.4-2015 RFD participating in a ZigBee Sub-GHz network which is neither the ZigBee coordinator nor a ZigBee router.

218

4 Acronyms and abbreviations

AODV	Ad-Hoc On-Demand Distance Vector
FFD	IEEE 802.15.4 Full Function Device
IEEE	Institute of Electrical and Electronic Engineers
PICS	Protocol Implementation Conformance Statement
RFD	IEEE 802.15.4 Reduced Function Device

219

5 General description

220
221 The sections in this document are:

- 222 • Knob settings – details of values to be used for parameters specified in the ZigBee specification
223 for tuning the operation of the ZigBee stack, including network, application and security
224 settings.
- 225 • Functional description – further operational restrictions to be applied to all devices in this
226 feature set where various approaches are otherwise supported by the ZigBee specification.
- 227 • Protocol implementation conformance statement (PICS) – a formal definition of functionality
228 to be implemented in these devices.

229 These requirements aim to allow a designer to make necessary assumptions about what settings, features
230 and safeguards will be in place in the networks in which a device will be deployed.

231 For clarity, settings applied to the ZigBee PRO Multi-MAC (PRO MM) feature set will be marked with
232 the string **ZigBee PRO MM** and settings applied to the ZigBee-PRO feature set will be marked with the
233 string **ZigBee-PRO**. Parameters that are unique to Multi-Band (MB or sub GHz interface) will be called
234 out in PRO MMPRO MM PICS cells including unique timing. If timing and functionality the same as
235 ZigBee PRO and **ZigBee PRO MM** the cells will be merged to flag timing, behavior, etc.. are the same
236 on Sub GHz interface and 2.4 GHz interface as part of rev 0.9 release.

237 R22 stack depreciated ZigBee 2007 stack functionality therefore starting in R22 ZigBee 2007
238 functionality can be removed from the R22 stack.

239 R22 sub GHz interface channel and channel spacing is targeted for Great Britain deployment and
240 European country deployment.

241 Green Power is only certifiable on 2.4 GHz interface.

242 Functionality not supported by Great Britain will be called out in the PICS, for example sub GHz routers
243 will not be supported.

244 Channel Change Manager is a function of the Multi-MAC (MM) Coordinator. Channel change is driven
245 by head end systems which is out of scope of this document. MM and 2.4 GHz devices SHALL detect a
246 channel change via a keep alive method or other methods and properly form network on new Sub-GHz
247 channel and/or on new 2.4 GHz channel. Channel change can occur on Sub-GHz network or 2.4 GHz
248 network or both networks. The reason for channel change is outside the scope of this document.

249 6 Knob settings

250 6.1 Introduction

251 This section specifies values for parameters specified in the ZigBee specification for tuning the operation
 252 of the **ZigBee PRO MM** and ZigBee-PRO stack. This section describes settings for both **ZigBee PRO**
 253 **MM** and ZigBee-PRO feature sets applied to the ZigBee R22 Specification ([R1])

254 6.2 Network settings

255 The network settings for the ZigBee PRO and **ZigBee PRO MM** feature sets are, for the most part,
 256 described in the restricted PICS captured in Section 10.4. Those setting not covered by the PICS are
 257 listed in Table 2.

258 **Table 2 – Network settings for this feature set**

Parameter Name	Setting		Comments
<i>nwkTransactionPersistenceTime</i>	0x01f4	ZigBee PRO MM	Note that this value essentially “covers” the MAC attribute of the same name. Note also that, while [R1] implies that this quantity has meaning only in beacon-enabled networks, it may actually be used in beaconless networks as well and, in that case, is a multiplier for <i>aBaseSuperframeDuration</i> . The value here yields a persistence time of 7.68 seconds using the 2.4Ghz symbol rate from [R9] in a non-beaconed network.
		ZigBee- PRO	
<i>nwkReportConstantCost</i>	FALSE	ZigBee PRO MM	The NWK layer in PRO shall always calculate routing cost on the basis of neighbor link cost and never report constant cost.
		ZigBee- PRO	

259 6.3 Application settings

260 The application settings for the ZigBee and ZigBee-PRO feature sets are, for the most part, described in
 261 the restricted PICS captured in Section 10.6. Those setting not covered by the PICS are listed in Table 3.

262 **Table 3 – Application settings for this feature set**

Parameter Name	Setting		Comments
Number of active endpoints per sleeping ZigBee end device (maximum)	-	ZigBee PRO MM	As the responsibility to arrange for caching of service discovery information lies with the end device itself, this parameter is not restricted.
		ZigBee- PRO	

Parameter Name	Setting	Comments	
Config_NWK_Leave_removeChildren	FALSE	ZigBee PRO MM	
		ZigBee- PRO	

263 6.4 Security settings

264 The security settings for the ZigBee and ZigBee-PRO feature sets are listed in Table 4.

265 **Table 4 – Security settings for this feature set**

Parameter Name	Setting	Comments	
apsSecurityTimeoutPeriod	TxDuration ¹ * (2*NWK Maximum Depth) + (AES Encrypt/Decrypt times)	ZigBee PRO MM	Where AES Encrypt/Decrypt times = 200ms, and Where NWK Maximum Depth is assumed to be 5, meaning every device in the network can be reached in not more than 10 hops , and Where TxDuration is assumed to be 1562.5 octetDurations (50 msec on 2.4GHz), meaning maximum duration of transmitting a packet by a hop, i.e. 700 milliseconds on 2.4 GHz. Note that this timeout assumes worst case AES engine speeds and is not indicative of expected performance for most devices.
		ZigBee- PRO	Where AES Encrypt/Decrypt times = 200ms, and Where NWK Maximum Depth is assumed to be 15, meaning every device in the network can be reached in not more than 30 hops, and Where TxDuration is assumed to be 1562.5 octetDurations (50 msec on 2.4GHz), meaning maximum duration of transmitting a packet by a hop, i.e. 1.7 seconds on 2.4 GHz. Note that this timeout assumes worst case AES engine speeds and is not indicative of expected performance for most devices.

266

¹ CCB 1623

267 7 Functional description

268 For the most part, the functioning of ZigBee **PRO MM** and ZigBee-PRO with respect to the NWK layer,
269 the APS layer and the ZDO is described in [R1]. However, the configuration details and operational
270 requirements for devices operating under the ZigBee **PRO MM** and ZigBee-PRO feature sets lead to
271 some special functional considerations, which are detailed here.

272 7.1 Device roles

273 The basic roles performed by ZigBee devices in ZigBee **PRO MM** and ZigBee-PRO networks are
274 determined by their device type:

- 275 • The **ZigBee PRO and PRO MM coordinator** initiates network formation, choosing the
276 network channel, PAN ID and extended PAN ID in the process, and thereafter should act as a
277 ZigBee router. It may also perform the roles of trust center and Network Channel Manager.
278 With respect to binding, the ZigBee coordinator is expected to handle end device bind request
279 on behalf of all end devices in the network but is not expected to be a global binding repository
280 for the network.
- 281 • **All ZigBee routers** are called upon to relay traffic on behalf of other devices in the network
282 and, in particular, are required to act as routing agents on behalf of their end device children,
283 which will typically not have the neighbor tables, routing tables, route discovery tables or
284 broadcast transaction tables required to perform routing. Since end devices may sleep, ZigBee
285 routers and ZigBee coordinators in their role of ZigBee routers may cache discovery information
286 on behalf of their sleeping end-device children. A ZigBee router may perform the role of trust
287 center and Network Channel Manager.
- 288 • **All ZigBee end devices** are joined to and managed by ZigBee routers or the ZigBee coordinator.
289 Because ZigBee-PRO networks are beaconless, there is no built-in synchronization mechanism
290 between sleeping end devices and their router parents. End devices are free to set their own duty
291 cycles within the broad polling limits defined by this feature set. End devices that wish to have
292 their discovery information cached by their parent or some other device are responsible for using
293 the discovery cache commands to achieve this.

294 Under the ZigBee and ZigBee-PRO feature sets, all devices are expected to manage their own binding
295 tables if they use binding tables.

296 This section is valid for both the **ZigBee PRO MM** and **ZigBee PRO** feature sets. In R22 release only
297 one ZigBee MB coordinator is supported per HAN network and no ZigBee MB or sub GHz routers are
298 supported to simplify deployment for GB market.

299

300 7.2 ZigBee: Compatibility with Other Feature sets

301 Devices implementing the ZigBee feature set will advertise a feature set identifier of 1 in their beacon
302 payloads as stated below in the additional restrictions for PICS item NLF4. In general, such devices will
303 seek out and join networks in which the ZigBee coordinator (Centralized network) and all ZigBee routers
304 implement the ZigBee feature set and advertise this fact by placing a feature set identifier of 1 in their
305 beacon payloads.

306 In ZigBee 3.0 ZigBee End Devices (eg. Light, etc..) and ZigBee Router Devices (eg Light switch, etc..) can form multiple distributed networks without a ZigBee coordinator in the network using distributed security. (CCB 2178)

309 In order to provide compatibility with devices implemented according to the ZigBee-PRO feature set,
310 ZigBee devices shall additionally be able to join networks which advertise a feature set identifier of 2 in
311 their beacon payloads but the device must join the ZigBee-PRO networks as end devices and only those
312 ZigBee-PRO networks employing standard network security.

313 This section is valid for the **ZigBee PRO MM and ZigBee PRO** feature set.

314 **7.3 ZigBee-PRO: Feature set**

315 **7.4 Binding tables**

316 Binding tables, if used, shall be located on the source device. While binding is optional, devices that
317 choose to use binding tables should allocate enough binding table entries to handle their own
318 communications needs. This suggests that binding table size should be flexible enough that it can be set,
319 at least at compile time, with some awareness of the actual intended usage of the device.

320 This section is valid for both the **ZigBee PRO MM** and **ZigBee-PRO** feature sets.

321 **7.5 Multicast mechanism and groups**

322 Support for APS level multicasts is mandatory to support compatibility with ZigBee devices. The
323 multicast groups are then established using the application level mechanisms. Support for routing of
324 network level multicasts is mandatory in the ZigBee-PRO feature set.

325 ZigBee devices do not support network level multicasts.

326 **7.6 Trust Center Policies and Security Settings**

327 A ZigBee PRO network shall have a trust center uniquely pointed to by each device in the network
328 through `apsTrustCenterAddress` within each network member device. It is beyond the scope of the PRO
329 Feature set to describe how this value is set or whether it is changed and the Trust Center relocated to
330 another device during operation. The only requirement of the PRO Feature set is that all devices in the
331 network point to the one unique Trust Center and that the device pointed to as the Trust Center supplies
332 the security services described by this document.

333 The trust center dictates the security parameters of the network, such as which network key type to use,
334 settings of the service permissions table, when, if at all, to allow devices to use unsecured association to
335 the network, and when, if at all, to allow an application master or link key to be set up between two
336 devices. For interoperability, there are two distinct security settings that can be used within the ZigBee
337 PRO feature set – a standard and a high security.

338 Networks can exist for periods without a trust center. There are some operations where it is necessary
339 for the trust center to be operational in the network. These include initial network setup, key changes,
340 and when joining and rejoining devices require updated keys.

341 A wide range of implementations are possible, depending on the requirements of the application. A high
342 security trust center may allow the user to install devices “out-of-band”, keep separate link keys for
343 different devices, optionally ignore `Mgmt_Permit_Joining_req` commands from other nodes, and
344 configure application trust policies between devices or groups of devices, etc. A standard security trust
345 center would not offer these advantages, but would not be required to carry the associated costs.

346 **7.7 Battery powered devices**

347 ZigBee-PRO networks may, of course, contain battery-powered devices. ZigBee routers are required to
348 have their receivers enabled whenever they are not transmitting.

349 As mentioned above, ZigBee-PRO networks are beaconless networks and, in the absence of an explicit
350 mechanism for synchronization and indirect transmission, sleeping devices must set their own duty
351 cycles and use polling, under ZDO control, if they expect to receive frames that are directed to them
352 when they are asleep. The feature set provides that parent devices, i.e. ZigBee routers and the ZigBee
353 coordinator, hold frames for $0x01F4$ symbols² (7.68 seconds on 2.4 GHz) on behalf of sleeping end
354 devices and this is also, roughly speaking, the maximum polling rate prescribed here. Devices may
355 implement a polling interval longer than $0x01F4$ symbols³, however the application will then have to
356 handle the potential loss of messages during longer sleep cycles.

² CCB 1624

³ CCB 1624

357 **7.8 Mains powered devices**

358 It is assumed that for most ZigBee-PRO networks, the ZigBee coordinator and ZigBee routers will be
359 mains-powered and always on in order to properly perform their required roles with respect to the
360 operation of the network.

361 **7.9 Persistent storage**

362 The ZigBee-PRO feature set does not support devices without persistent storage. Devices have
363 information required to be saved between unintentional restarts and power failures. See [R1] sections
364 2.2.8.1 and 3.6.8 for details of persistent data in the application and NWK layers. Various security
365 material shall additionally be stored across power failures. All attributes in sections 4.3.3 and 4.4.10
366 shall be stored, except that it is not mandatory to store those values which can safely be recovered using
367 other stored information, or other methods.

368 **7.10 Address Reuse**

369 Re-use of previously assigned network short addresses in ZigBee-PRO devices is permitted subject to
370 execution of the address conflict procedure by the device on the re-used address.

371 **7.11 Duty cycle limitations and fragmentation**

372 No mandatory restrictions on 2.4 GHz are defined for intermittent, low channel usage data, although
373 developers are encouraged to minimise bandwidth usage wherever possible.

374 Large acknowledged unicast transmissions should generally use the APS fragmentation mechanism,
375 where supported, as this handles retransmissions, duplicate rejection, flow control and congestion control
376 automatically. Use of the fragmentation mechanism is as specified in the application profile documents.

377 Sub GHz UK deployment limits Regulatory Duty Cycle to 2.5% when CSMA LBT is used.

378 **7.11.1 Vulnerability join**

379 Vulnerability join shall be optional for networked devices, but support for it shall be mandatory for trust
380 centers. The default for networks is permit joining is off. Permit joining is allowed for established time
381 periods based on application requirements and specific instructions based on the system design.

382 Devices that join but do not successfully acquire and use the relevant security keys within the specified
383 security timeout period shall disassociate themselves from the network, and their short address may be
384 reused.

385 **7.11.2 Pre-installation**

386 Pre-installation is acceptable. Pre-installed devices are not exempt from the other requirements in this
387 document. For example, a device certified as a trust center for this feature set shall support vulnerability
388 installation of new devices, even if it is initially pre-installed.

389 **7.12 Security**

390 This feature set is designed to allow the efficient deployment of low cost devices, while also supporting
391 the security requirements of highly sensitive applications. Installation and network maintenance
392 procedures and administration are defined with the goal of satisfying the requirements of a range of
393 applications within a single network infrastructure.

394 To achieve this, two security modes are specified: Standard mode and High Security mode. By default
395 all applications will use the network key for communications. However, where confidentiality from
396 other network nodes is required an application shall be permitted to use application link keys. Where
397 link keys are required by specific application profiles, commands not secured with a link key shall be
398 processed according to the rules established by the application profile.

399 The trust center plays a key role in determining the security settings in use in the network, and can
400 optionally be implemented to apply further restrictions on the network.

401 It is recommended that the trust center change the network key if it is discovered that any device has
402 been stolen or otherwise compromised, and in order to avoid deadlock if all frame counter records
403 become filled up. It is an application responsibility within the Trust Center to effect the change to the
404 network key. There is no expectation that the network key be changed when adding a new device.

405 All devices may implement a service permissions table, which they may use to determine which devices
406 are authorized to issue which commands. Unauthorized commands should not be carried out.

407 The trust center should be implemented to make appropriate choices about when to initiate an application
408 master/link key shared between two devices. Where restrictions between devices are required it is the
409 responsibility of the system installer/administrator to deploy a suitably intelligent trust center and
410 configure it to make relevant checks before initiating sharing of application link keys between two
411 devices. For example, it might facilitate policies based on certain times, certain manufacturers or device
412 types, or when the trust center is configured in a certain way, etc. By default a simple trust center should
413 always allow requests for link keys.

414 Devices may perform the relevant in or out of band authentication or key exchange before acquiring or
415 using a link key with a new target.

416 **7.12.1 Security Modes within PRO Networks**

417 The feature set shall use two security modes: Standard mode and High Security mode.

418 With the Standard mode, network keys and application link keys are permitted for all devices. The
419 network key type shall be the “standard” network key. It shall not be required that devices perform entity
420 authentication with their parent on joining nor shall it be required to perform entity authentication
421 between neighbors. If end devices wish to have a trust center link key, this should be requested using the
422 request key command. Note that it is optional for the trust center to support link keys.

423 With the High Security mode, all three key types are permitted and shall be supported by all devices. The
424 network key type shall be the “high security” network key. It shall be required that devices shall perform
425 entity authentication with their parent on joining and it shall be required to perform entity authentication
426 between neighbors. Frames from devices not in the neighbour table shall not be accepted.

427 When a “standard” type network key is in use, devices shall be permitted to update the network key when
428 requested to do so by a command appropriately secured with the current network key. When a “high
429 security” type of network key is in use this shall not be permitted. Additionally, in “high security”, new
430 trust center link keys may be deployed by SKKE only, i.e.: they shall not be sent using key transport.

431 Bit 6 of the capabilities field (security bit) shall be used to indicate whether or not a joining (or re-joining)
432 device supports High Security mode. It shall be set to 0 if the joining or re-joining device does not
433 support High Security mode (i.e. supports Standard mode), and shall be set to 1 if it does support High
434 Security mode. The trust center may optionally make use of this information as part of its policy settings,
435 for example when determining whether or not to allow the device onto the network, or when determining
436 whether to initiate SKKE with a new joiner or send a link key and/or network key in the clear to the new
437 device.

438 The above specifications are as currently described in the ZigBee specification. Standard mode and High
439 Security mode allow implementation of two different strengths of security depending on the application
440 requirements and the specification supports a device indicating its security capabilities as it joins the
441 network, thus giving the Trust Center the means to be able to accept or reject the device based on its
442 policy.

443

444 **8 Instructions for completing the PICS proforma**

445

446 *If a given implementation is claimed to conform to this standard, the actual PICS proforma to be filled in by a supplier shall be*
447 *technically equivalent to the text of the PICS proforma in this document, and shall preserve the numbering and naming and the*
448 *ordering of the PICS proforma.*

449

450 A PICS which conforms to this document shall be a conforming PICS proforma completed in
451 accordance with the instructions for completion given in this section.

452

453 The main part of the PICS is a fixed-format questionnaire, divided. Answers to the questionnaire are to
454 be provided in the rightmost column, either by simply marking an answer to indicate a restricted choice
455 (such as Yes or No), or by entering a value, set, or range of values.

10 Protocol implementation conformance statement (PICS) proforma

10.1 Abbreviations and special symbols

Notations for requirement status:

M	Mandatory
O	Optional
O.n	Optional, but support of at least one of the group of options labeled O.n is required.
N/A	Not applicable
X	Prohibited

“item”: Conditional, status dependent upon the support marked for the “item”.

For example, if FDT1 and FDT2 are both marked “O.1” this indicates that the status is optional but at least one of the features described in FDT1 and FDT2 is required to be implemented, if this implementation is to follow the standard of which this PICS Proforma is a part.

In below table if a Multi-MAC (MM) device list bands supports, if supported concurrently with 2.4 GHz, and maximum Power level supported in each band.

10.2 ZigBee device types

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
FDT1	Is this device capable of acting as a ZigBee coordinator?	[R1]/Preface (Definitions)		ZigBee PRO MM	O.1		yes
				ZigBee-PRO	O.1		yes
FDT2	Is this device capable of acting as a ZigBee router? Note: Great Britain not supporting sub GHz router in R22 but can be deployed in other European markets.	[R1]/Preface (Definitions)		ZigBee PRO MM	O.1		No
				ZigBee-PRO	O.1		No
FDT3	Is this a ZigBee end device?	[R1]/Preface (Definitions)		ZigBee PRO MM	O.1		No
				ZigBee-PRO	O.1		No

513

514 **10.3 IEEE 802.15.4 PICS**515 **10.3.1 FDT2 and FDT3 network join options**

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
JN1	The device joins a network by scanning and then associating (client)	[R9] 7.3.1.1	FDT1:X FDT2:O FDT3:O	ZigBee PRO MM	FDT1: X FDT2: M FDT3: M		No

NLF23	Does the network layer reserve routing capacity for route repair operations? (Note: This capability has been removed from the ZigBee specification as of r08).	None	X	ZigBee PRO MM	X		No
				ZigBee-PRO	X		No
NLF24	Does the device implement beacon collision-avoidance measures?	[R1]/3.6.4	O	ZigBee PRO MM	X		No
				ZigBee-PRO	X		No
NLF25	Does the network layer support router re-enumeration as a route repair method? (Note: This capability has been removed from the ZigBee specification as of r10).	None	X	ZigBee PRO MM	X		Click here to enter text.
				ZigBee-PRO	X		Click here to enter text.
NLF26	Does the network layer assume that links are symmetrical and establish forward and reverse routes at the same time?	[R1]/3.5.2, 3.6.3.5.2	O	ZigBee PRO MM	X	Devices using the ZigBee stack profile must set: <i>nwkSymLink</i> = FALSE	yes
				ZigBee-PRO	M	Devices using the ZigBee-PRO stack profile shall set: <i>nwkSymLink</i> = TRUE	yes
NLF27	Does the network layer maintain a neighbor table or tables in order to store information about nearby devices?	[R1]/3.6.1.5	M	ZigBee PRO MM	M	ZigBee coordinators and ZigBee routers shall maintain a neighbor table or tables as follows: ZigBee coordinator (minimum): 24 entries ZigBee router (minimum): 25 entries ZigBee end device (minimum): 1 entry	yes

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
				ZigBee-PRO	M	<p>ZigBee coordinators and ZigBee routers shall maintain a neighbor table or tables as follows:</p> <p>ZigBee coordinator (minimum): (Number of child end devices accepted) plus 16</p> <p>ZigBee router (minimum): (Number of child end devices accepted) plus 16</p> <p>ZigBee end device: 1 (Note: End Device shall support a minimum of 5 neighbor table entries and that entry shall be for their parent) (CCB 2091)</p> <p>Where (Number of child end devices accepted) is the minimum number of end device children that a particular router or coordinator in the network is configured to accept.</p>	yes
NLF28	Does the network layer buffer frames pending route discovery or route repair operations?	[R1]/3.6.3.5.1	O	ZigBee PRO MM	O		yes
				ZigBee-PRO	O		yes
NLF29	Does the network layer buffer data frames on behalf of end device that are its children?	[R1]/3.6.5	FDT1:M FDT2:M FDT3:X	ZigBee PRO MM	FDT1: M FDT2: M FDT3: X	ZigBee router and coordinator devices shall set: Number of frames buffered on behalf of sleeping end devices (minimum): 1	yes
				ZigBee-PRO	FDT1: M FDT2: M FDT3: X	Note that this means 1 frame TOTAL not 1 frame for each end device. In other words, it is up to the implementer to put in some buffering but routers should not be overburdened with, possibly unnecessary, buffering.	yes
NLF30			O	ZigBee PRO MM	X		Click here to enter text.

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
	Is the device capable of participating in a beacon-oriented network?	[R1]/Preface Definitions and Network Topology sections		ZigBee-PRO	X	On invocation of the NLME-NETWORK-FORMATION.request or NLME-START-ROUTER.request primitives, devices shall employ: BeaconOrder = 0x0f SuperframeOrder = 0x0f	Click here to enter text.
NLF31	Does the network layer support the detection of address conflicts?	[R1]/3.6.1.9	O	ZigBee-PRO MM	X		yes
				ZigBee-PRO	FDT1: M FDT2: M FDT3: X	Address conflict detection is mandatory for this stack profile (nwkUniqueAddr = FALSE). The coordinator and all routers shall implement the Address Conflict procedure.	yes
NLF32	Does the network layer support resolving address conflicts?	[R1]/3.6.1.9.3	FDT1: O FDT2: O FDT3: X	ZigBee-PRO MM	X		No
				ZigBee-PRO	FDT1: M FDT2: M FDT3: X	Address conflict resolution is mandatory for this stack profile (nwkUniqueAddr = FALSE). The coordinator and all routers shall implement the Address Conflict procedure.	yes
NLF33	Does the network layer support the detection of PAN ID conflicts?	[R1]/3.6.1.13	O	ZigBee-PRO MM	FDT1:M FDT2:M FDT3:X	PAN ID conflict resolution is mandatory for the coordinator and routers. Notification of a PAN ID conflict via the NWK Status command frame directed to the nwkManagerAddr is mandatory for all routers and the coordinator. The nwkManagerAddr is required to process all NWK Status command frames directed to it by the coordinator and routers.	yes
				ZigBee-PRO	FDT1:M FDT2:M FDT3:X		yes

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
NLF34	Does the device support resolving PAN ID conflicts?	[R1]/3.6.1.13	O	ZigBee PRO MM	FDT1: M FDT2: M FDT3: X	PAN ID conflict resolution is mandatory for the coordinator and routers. Notification of a PAN ID conflict via the NWK Status command frame directed to the nwkManagerAddr is mandatory for all routers and the coordinator. The nwkManagerAddr is required to process all NWK Status command frames directed to it by the coordinator and routers.	yes
				ZigBee-PRO	FDT1: M FDT2: M FDT3: X		yes

566 **10.5 Security PICS**

567 **10.5.1 ZigBee security roles**

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
SR1	Is this device capable of acting in the role of a trust center?	[R1]/1.4, 4.6.2	FDT1: M FDT2: O FDT3: X	ZigBee PRO MM	FDT1: M FDT2: O FDT3: X	Upon initial network formation, the coordinator must at least temporarily serve as the trust center. After formation, at least one of the routers or the coordinator must be capable of acting in the role of the trust center. It is an application responsibility to transition the trust center from the coordinator to another router device pointed to by apsTrustCenterAddress within all devices in the network if desired. For the device whose address is apsTrustCenterAddress, it is mandatory to act in the role of the trust center. All devices in the network shall maintain a single consistent definition of apsTrustCenterAddress. It is possible, under application control, to change apsTrustCenterAddress during later network operation, however, it is the application's responsibility to ensure that all devices in the network are notified of the change. Trust center must be collocated with ZC (short address 0x0000) throughout network life (CCB 2178)	yes

NLS3	Does the device support the ZigBee secured NWK layer frame format?	[R1]/4.3.1	M	ZigBee PRO MM	M		yes
				ZigBee-PRO	M		yes
NLS4	Does the device support the ability to manage at least one network key and corresponding outgoing frame counter?	[R1]/4.2.1.3, 4.3.3	M	ZigBee PRO MM	M		yes
				ZigBee-PRO	M		yes

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
NLS5	Does the device support the ability to manage two network keys and corresponding outgoing frame counter?	[R1]/4.2.1.3, 4.3.1, 4.3.3	O	ZigBee PRO MM	M	All devices shall maintain at least 2 NWK keys with the frame counters consistent with the security mode of the network (Standard or High). A NWK key of all zero's shall be treated as reserved. Due to the fact that a NWK key of all zero's was used as a "dummy key" and employed in the trust center exchange where pre-configured keys are used, a NWK key of all zero's is indistinguishable from transport of a dummy key.	yes
				ZigBee-PRO	M		yes
NLS7	Does the device support at least one frame counter for incoming NWK layer frames for each potential source of incoming frames (e.g., a coordinator or router should support the same number of counters per network key as the maximum number of neighbor table entries and an end device should support one counter per network key)?	[R1]/4.2.1.3, 4.3.1, 4.3.3	O	ZigBee PRO MM	M	Devices using this stack profile in Standard Security and High Security mode shall store a single frame counter per neighbor table entry associated with the current NWK Key.	yes
				ZigBee-PRO	M		yes
NLS8	Does the device support a setting to indicate that all incoming NWK frames must be checked for freshness (i.e., <i>nwkAllFresh</i>)?	[R1]/4.4.1.2, 4.6.2.1, 4.6.2.2	MOO1: M MOO2: O	ZigBee PRO MM	MOO1: M MOO2: O	See also the trust centre policies document [R4].	yes
				ZigBee-PRO	MOO1: M MOO2: O		yes

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
NLS9	Does the device support the ability to secure all incoming and outgoing NWK frames (i.e., the <i>nwkSecureAllFrames</i> attribute of the NIB)?	[R1]/4.2.3, 4.6	O	ZigBee PRO MM	M	Devices using the ZigBee and ZigBee-PRO feature sets shall set: <i>nwkSecureAllFrames</i> = TRUE	yes
				ZigBee-PRO	M		yes
NLS10	Does the device support the ability to reject frames from neighbors which have not been properly authenticated?	[R1]/4.2.3, 4.6	O	ZigBee PRO MM	MOO1: M MOO2: O	Coordinator and Router devices employing ZigBee and ZigBee PRO Standard Mode security shall not reject frames from neighbors which have not been properly authenticated. Coordinator and Router devices employing ZigBee PRO High Security shall reject frames from neighbors which have not been properly authenticated.	yes
				ZigBee-PRO	MOO1: M MOO2: O		yes

579

580 **10.5.6 APS layer security**

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
ASLS1	Does the device support the security processing of APS layer outgoing frames?	[R1]/4.4.1.1	M	ZigBee PRO MM	M		yes
				ZigBee-PRO	M		yes
ASLS2	Does the device support the security processing of APS layer incoming frames?	[R1]/4.4.1.2	M	ZigBee PRO MM	M		yes

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
				ZigBee-PRO	M		yes
ASLS3	Does the device support the ZigBee secured APS layer frame format?	[R1]/4.4.7.3	M	ZigBee PRO MM	M		yes
				ZigBee-PRO	M		yes
ASLS4	Does the device support the ability to manage trust center master keys?	[R1]/4.4.3, 4.4.10, 4.6.3	O	ZigBee PRO MM	MOO1: M MOO2: O	In ZigBee and ZigBee PRO Standard Mode security, trust center master keys are optional for all devices. In ZigBee PRO High Security, trust center master keys mandatory for all devices.	Click here to enter text.
				ZigBee-PRO	MOO1: M MOO2: O		Click here to enter text.
ASLS5	Does the device support the ability to manage application master keys?	[R1]/4.2.3.5, 4.4.3, 4.4.6, 4.4.10, 4.6.3.5	O	ZigBee PRO MM	O	In ZigBee and ZigBee PRO Standard and ZigBee PRO High security modes, application master keys are optional for all devices.	Click here to enter text.
				ZigBee-PRO	O		Click here to enter text.
ASLS6	Does the device support the ability to manage application data keys and corresponding security material (e.g., the incoming and outgoing frame counters)?	[R1]/4.2.1.3, 4.4.1, 4.4.10	O	ZigBee PRO MM	O		yes
				ZigBee-PRO	O		yes
ASLS7	Does the device support network key incoming frame counters for incoming APS layer frames secured with the network key?	[R1]/4.4.1.2, 4.3.3	O	ZigBee PRO MM	X	ZigBee and ZigBee PRO Standard Mode or ZigBee-PRO High Mode security use nwkSecure-AllFrames=TRUE, the APS security header is not employed when the network key is used for incoming APS layer frames.	No
				ZigBee-PRO	X		No

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
ASLS8	Does the device support establish-key service using the Symmetric-Key Key Establishment (SKKE) protocol?	[R1]/4.2.3.1, 4.4.2, 4.4.9.1	O	ZigBee PRO MM	MOO1: M MOO2: O	In ZigBee and ZigBee PRO Standard Mode security, SKKE is optional for all devices. In ZigBee PRO High Security, SKKE is mandatory for all devices.	Click here to enter text.
				ZigBee-PRO	MOO1: M MOO2: O		Click here to enter text.
ASLS9	Does the device support the origination of transport-key commands?	[R1]/4.2.3.2, 4.4.3, 4.4.9.2	SR1: M	ZigBee PRO MM	SR1: M		yes
				ZigBee-PRO	SR1: M		yes
ASLS10	Does the device support the receipt of transport-key commands?	[R1]/4.2.3.2, 4.4.3, 4.4.9.2	O	ZigBee PRO MM	M	A newly joined device in ZigBee or ZigBee PRO Standard and ZigBee PRO High Security shall be capable of receiving the NWK key from the trust center via transport-key commands.	yes
				ZigBee-PRO	M		yes
ASLS11	Does the device support the origination of update-device commands?	[R1]/4.2.3.3, 4.4.4, 4.4.9.3	FDT1: O FDT2: O FDT3: X	ZigBee PRO MM	FDT1: M FDT2: M FDT3: X		yes
				ZigBee-PRO	FDT1: M FDT2: M FDT3: X		yes

[R1]/2.4.3.3.1 1	AZD36: FDT1: M FDT2: X FDT3: X	ZigBee PRO MM AZD36: FDT1: M FDT2: X FDT3: X	The ability for a non Network Channel Manager to receive and process the Mgmt_NWK_IEEE Joining List_-req command is mandatory for the network manager, all routers and all end devices for R22. Applicable to Sub GHz and 2.4 GHz channel list.	yes
AZD806	Does the MM device support the Channel Change Manager?		AZD36: FDT1:M FDT2: X FDT3:X	ZigBee PRO MM AZD36: FDT1:M FDT2: X FDT3:X		yes
AZ807	Does the MM device support the LINK_POWER_DELTA command on Sub-GHz interface?		AZD36: FDT1:M FDT2: X FDT3:M	ZigBee PRO MM AZD36: FDT1:M FDT2: X FDT3:M	LINK POWER DELTA command is only supported on MM Coordinator and Sub-GHz end devices on Sub-GHz interface.	yes
AZD49		[R1]/2.5.6	M	ZigBee-PRO M		yes

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
	Does the device support the mandatory Configuration Attributes?			ZigBee PRO MM	M		yes
AZD50	Does the device support the optional Complex Descriptor configuration attribute?	[R1]/2.5.6	O	ZigBee-PRO	O		yes
				ZigBee PRO MM	O		yes
AZD51	Does the device support the optional User Descriptor configuration attribute?	[R1]/2.5.6	O	ZigBee-PRO	O		yes
				ZigBee PRO MM	O		yes
AZD52	Does the device support the optional Max Bind configuration attribute?	[R1]/2.5.6	O	ZigBee-PRO	O		No
				ZigBee PRO MM	O		No
AZD53	Does the device support the optional Master Key configuration attribute?	[R1]/2.5.6	O	ZigBee-PRO	O		No
				ZigBee PRO MM	O		No
AZD54		[R1]/2.5.6	FDT1: M FDT2: X FDT3: X	ZigBee-PRO	FDT1: M FDT2: X FDT3: X		yes

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
	Does the device support the optional End Device Bind Timeout configuration attribute?			ZigBee PRO MM	FDT1: M FDT2: X FDT3: X		yes
AZD55	Does the device support the optional Permit Join Duration configuration attribute?	[R1]/2.5.6	FDT1: M FDT2: M FDT3: X	ZigBee-PRO	FDT1: M FDT2: M FDT3: X		yes
				ZigBee PRO MM	FDT1: M FDT2: M FDT3: X		yes
AZD56	Does the device support the optional NWK Security Level configuration attribute?	[R1]/2.5.6	AZD19: O	ZigBee-PRO	AZD19: O		No
				ZigBee PRO MM	AZD19: O		No
AZD57	Does the device support the optional NWK Secure All Frames configuration attribute?	[R1]/2.5.6	AZD19: O	ZigBee-PRO	AZD19: O		yes
				ZigBee PRO MM	AZD19: O		yes
AZD500	Does the device support the optional NWK Leave Remove Children configuration attribute?	[R1]/2.5.6	AZD19: FDT1: M FDT2: M FDT3: X	ZigBee-PRO	AZD19: FDT1: M FDT2: M FDT3: X		yes
				ZigBee PRO MM	AZD19: FDT1: M FDT2: M FDT3: X		yes
AZD501		[R1]/2.5.6	FDT1: O FDT2: O FDT3: X	ZigBee-PRO	FDT1: O FDT2: O FDT3: X		No

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
	Does the device support the optional NWK Broadcast Delivery configuration attribute?			ZigBee PRO MM	FDT1: O FDT2: O FDT3: X		No
AZD502	Does the device support the optional NWK Transaction Persistence Time configuration attribute?	[R1]/2.5.6	FDT1: O FDT2: O FDT3: X	ZigBee-PRO	FDT1: O FDT2: O FDT3: X		No
				ZigBee PRO MM	FDT1: O FDT2: O FDT3: X		No
AZD503	Does the device support the optional NWK Indirect Poll Rate configuration attribute?	[R1]/2.5.6	FDT1: X FDT2: X FDT3: M	ZigBee-PRO	FDT1: X FDT2: X FDT3: M		No
				ZigBee PRO MM	FDT1: X FDT2: X FDT3: M		No
AZD504	Does the device support the optional Max Associations configuration attribute?	[R1]/2.5.6	FDT1: O FDT2: O FDT3: X	ZigBee-PRO	FDT1: O FDT2: O FDT3: X		No
				ZigBee PRO MM	FDT1: O FDT2: O FDT3: X		No
AZD505	Does the device support the optional NWK Direct Join Addresses configuration attribute?	[R1]/2.5.6	FDT1: O FDT2: O FDT3: X	ZigBee-PRO	FDT1: O FDT2: O FDT3: X		No
				ZigBee PRO MM	FDT1: O FDT2: O FDT3: X		No
AZD506		[R1]/2.5.6	FDT1: X FDT2: O FDT3: O	ZigBee-PRO	FDT1: X FDT2: O FDT3: O		No

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
	Does the device support the optional Parent Link Retry Threshold configuration attribute?			ZigBee PRO MM	FDT1: X FDT2: O FDT3: O		No
AZD507	Does the device support the mandatory end device timeout Rejoin Interval configuration attribute? (CCB 2144)	[R1]/3.6.10.3, 3.6.1.4.3.1	FDT1: X FDT2: O FDT3: O	ZigBee-PRO	FDT1: X FDT2: O FDT3: O		No
				ZigBee PRO MM	FDT1: X FDT2: O FDT3: O		No
AZD508	Does the device support the optional Max end device timeout Rejoin Interval configuration attribute? (CCB2144)	[R1]/3.6.10.3, 3.6.1.4.3.1	FDT1: X FDT2: O FDT3: O	ZigBee-PRO	FDT1: X FDT2: O FDT3: O		No
				ZigBee-PRO ZigBee PRO MM	FDT1: X FDT2: O FDT3: O		No
AZD509	When the routing procedure specifies that the NSDU is to be transmitted it is compliant to R22 per section 3.2.1.1.3?	[R1]3.2.1.1.3	FDT1: M FDT2: M FDT3: M	ZigBee-PRO ZigBee PROMB	FDT1: M FDT2: M FDT3: M		yes
AZD510	Does the device support Network Managemnt Data ChannelList Structure to support one or more MAC interfaces?	[R1]3.2.2.2.1	FDT1: X FDT2: O FDT3: O	ZigBee-PRO ZigBee PRO MM	FDT1: X FDT2: O FDT3: O		
AZD511	Does the device support Energy DetectChannelInfo defined in Table 3.9?	[R1]3.2.2.2.3	FDT1: X FDT2: O FDT3: O	ZigBee-PRO ZigBee PRO MM	FDT1: X FDT2: O FDT3: O		Click here to enter text.

Item number	Item description	Reference	ZigBee Status	Feature set Support		Additional Constraints	Platform Support
AZD512	Does the device properly support NLME-NETWORK-DISCOVERY request and Request primitive defined in Table 3.10?	[R1]3.2.2.3.1	FDT1: X FDT2: O FDT3: O	ZigBee-PRO ZigBee PROMB	FDT1: X FDT2: O FDT3: O		Click here to enter text.
AZD513	Does the device properly support NLME-NETWORK_INFORMATION request and response	[R1]3.2.2.5.3	FDT1: X FDT2: O FDT3: O	ZigBee-PRO ZigBee PRO MM	FDT1: X FDT2: O FDT3: O		Click here to enter text.
AZD514	Does the device properly support NLME-ED-SCAN request and response?	[R1] 3.2.2.12.2	FDT1: X FDT2: O FDT3: O	ZigBee-PRO ZigBee PRO MM	FDT1: X FDT2: O FDT3: O		Click here to enter text.
AZD515	Does the device support NLME-SET-INTERFACE command and response?	[R1]3.2.2.36	FDT1: X FDT2: O FDT3: O	ZigBee-PRO ZigBee PRO MM	FDT1: X FDT2: O FDT3: O		Click here to enter text.
AZD516	Does the device support NLME-GET-INTERFACE command and response?	[R1]3.2.2.37	FDT1: X FDT2: O FDT3: O	ZigBee-PRO ZigBee PRO MM	FDT1: X FDT2: O FDT3: O		Click here to enter text.
AZD517	Does the device support Verify Link Cost Command?	[R1]3.4.13	FDT1: X FDT2: O FDT3: O	ZigBee-PRO ZigBee PRO MM	FDT1: X FDT2: O FDT3: O		No
AZD518	Does the device support Power Negotiation on sub GHz channels?	[R1]3.6.11	FDT1: X FDT2: O FDT3: O	ZigBee-PRO	FDT1: X FDT2: O FDT3: O		No
