

WEeping JAPANESE MAPLE

Acer palmatum

'Dissectum Atropurpureum Ornatum'

A popular 'laceleaf' cultivar with excellent foliage colour variation from spring to autumn and a characteristic domed, weeping habit. The brilliant tones stand out well in the landscape. A suitable landscape feature for small protected gardens and parks.

Foliage: Deep red new growth becoming dark coppery-burgundy in spring, then fades to a bronze-green throughout summer. The autumn colours are usually brilliant orange tones. Deeply incised with seven to nine long, fine lobes that in turn have serrated lobes.

Flowers: Small, red flowers. Insignificant.

Fruit: Small, red and green samaras in pairs.

Culture: Adaptable to a range of soil types, but prefers a moist, well-drained soil. Should not be planted in exposed areas where hot summer winds may stress the tree and leaves may suffer scorch in very hot sun.

Size: 2 x 2 metres.

Care: For more information on planting, maintenance and care visit flemings.com.au

WEeping JAPANESE MAPLE

Bare-root pruning:

Remove at least 50% of each branch away evenly across the tree. Try to prune to just below a bud.
