GOLDEN ELM *Ulmus glabra* 'Lutescens'

An eye-catching, golden-foliaged Elm with a wide spreading habit. *Ulmus glabra* 'Lutescens' is a very impressive shade tree that can create foliage contrast in larger parks, gardens and properties where there is space for it to develop to its full potential.

Foliage: Bright greenish-gold, broadly obovate leaves up to 16 cm long, turning yellow in autumn. Rough to the touch on upper surface. In spring, the new growth is a pale lime-green.

Flowers: Insignificant.

Fruit: Rounded samaras up to 2 cm long.

Culture: Adaptable to a wide range of site conditions, but best in moist, well-drained soils. Good tolerance to air pollution. May require occasional irrigation in hot, dry conditions, but avoid waterlogged sites. Will generally not produce suckers unless damaged. Prone to attack by Elm Leaf Beetle and use of an integrated pest control regime is advised in areas where it is known to be present.

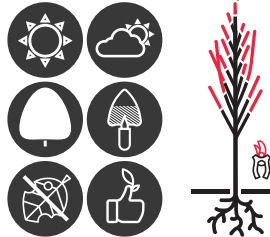

Size: 10 x 12 metres.

Plant Care: For more information on planting, maintenance and care visit flemings.com.au
