

Don't strangle your tree. Please remove label and tie, and file label for reference. Illustrations and notes intended as a guide only. Estimated size at 20 years.

## MOP TOP BLACK LOCUST

### *Robinia pseudoacacia*

### 'Umbraculifera'

A very tough 'globe-headed' standard that makes a formal specimen that can be clipped to shape. Can be planted alone or in groups in difficult areas such as small gardens, streets, malls and parks where space is restricted.

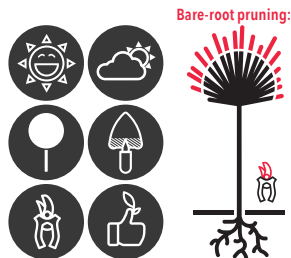

- Foliage:** Soft textured, mid-green, pinnate leaves to approximately 20 cm long, turning yellow in autumn. The new growth is a lighter green creating an attractive overall contrast.
- Flowers:** Rarely produced, creamy-white 'pea'-like flowers to 2 cm across.
- Culture:** Adaptable to a wide range of soils and site conditions including moderate drought, heat, air pollution, poor and/or slightly saline soils and coastal areas. Prefers a moist well-drained soil and full sun. Does not like excessively wet positions. Can be pruned severely, if desired, in late summer to restrict size. Generally pest and disease free. Propagated onto *Robinia pseudoacacia* that has a propensity to sucker. The suckers have a pair of large thorns at the base of every leaf.
- Size:** 5 x 5 metres
- Plant Care:** For more information on planting, maintenance and care visit [flemings.com.au](http://flemings.com.au)
